Kara - I just pulled one of the chemistry bottle for G1NE0905, it has a collection date/time of 3/12/19 @ 0915 so we can change that.

Not sure about G1NE0001 it's probably a typo on the AEL COC (hand written) and should be G1NE0901 to match the DEP COC (typed label). But you will need confirmation from the sampler and get a revision from AEL before we can change it.

Magan- please change the collection time for G1NE0905 to 0915 for this site. Thanks.

Hey Josh,

I think I need your help on this one too. One of the issues is described in the previous emails. (I still haven't gotten a response.) Then I realized that the sample time for G1NE0905 is different and maybe should have been 915 on the DEP COC. Also, I got to thinking that they sampled quite a few additional sites just for overflow from what they had on the DEP COC so maybe the G1NE0001 that they wrote on the AEL COC is actually correct and just a different site that was also sampled at 1045.

Can you please help!

Thanks,

Kara

Hi Greg,

Can you please confirm that field ID G1NE0901 was the site sampled at 10:45 for this event? I need to upload these results so that we can certify the lab report and make the data available. I am fairly certain that it was G1NE0901 that was sampled at 1045 since this was recorded by means of a printed label on the DEP COC but I still have to have some sort of confirmation from the sampler to explain why the report from AEL is different.

Thanks,

Kara

Hi Greg,

It looks like you and Efrain dropped off some samples to AEL Gainesville on 3/12. There is a discrepancy between the chain of custody dropped off to AEL and the COC sent to Tallahassee with the rest of the samples. The AEL chain of custody says field ID G1NE0001 was sampled at 1045 but the DEP chain of custody says G1NE0901. Can you clarify? The AEL COC is at the very end of the report that's attached.

Thanks!

Kara
