Thank you for clarification on that! I will issue you a revised report and spreadsheet. It may have not be until Monday due to our LIMS system going through maintenance today, but I'll try to get to it as soon as possible. I'll also relay that information to our South Lab in case that comes up at some point from them.

Thanks,

Kara Peterson

Hi Kara,

Regarding replicates, when you use them with the results of the dilution series, the replicate should be treated as its own sample. We had come across something recently with another lab and our QC section provided clarification.

For this example, it wouldn't be appropriate to combine the count and volume of the replicate with the counts and volumes of the dilution series. Our own lab would report out whatever result was higher (the result from the dilution series or the result from the replicate) and then make a comment saying what the other result was.

If there was a result from the dilution series that was in range and likewise, the replicate was in range, you could average the two results and "A" qualify them. That is not the case here since the counts weren't in range.

Can you issue a revised report excluding the LR from the final result?

Thanks!

Kara

Yeah there was were 0 counts on the 1mL, and 10mL, 1 count on the LR, and 3 counts on the 50mL plates. If you'd like I can send a copy of our bench sheet.

Were there counts on the 10mL dup plate?

Yes, that is correct.

Okay. So the 10mL had a lab duplicate that was included?

I just checked against the note on the report and it's correct so we performed 3 dilutions; (1mL, 10mL, 50mL) with a LR on the 10mL.

Hi Kara,

What dilutions went into the fecal result for site G2SW0052?

Thanks! Kara
