Kara,
I have removed the charges for Pace project 35448200. Please find attached the revised invoice.
Thank you

Hey Jeff,

The requirement for marine entero samples being diluted is required per the method not just our contract. The info about the dilution requirement in the Enterolert procedure is "Marine water samples must be diluted at least tenfold with sterile fresh water. Multiply the MPN value by the dilution factor to obtain the proper quantitative result."

I contacted the customer of this data and they can't use it. The dilution requirement is necessary because the salt can inhibit results. Can you take these samples off of the February invoice?

Thank you,

Kara

Kara,
I got with the supervisor and confirmed that the sample G4SE0119 was set up at a DF of 1. I reminded this morning the supervisors of our Ormond Beach, Tampa and South Florida labs to go over again with their analysts the need to run all Quanti-tray tests for this contract at a DF of 10 when we do not know if the samples are Fresh or Marine. I will keep an eye on this.

I corrected the sample ID on G4SE0119 and generated the revised report - attached.

Thanks

Hey Jeff,

A couple things on this report…. First, were the samples diluted? The report and data file show a 1x dilution but fresh/marine wasn't indicated on the chain of custody. I thought the analysts were going to be diluting 10x when they weren't sure. Also, it looks like field ID G4SE00119 needs to be changed to G4SE0119.

Thanks,

Kara
