I am not done with my investigation by any means I am still playing catch up but on these
2007b18-002 1/100 =0 1/10= 1 1/2 = >200 so she reported 1/10 would you rather us combine 1/100 and 1/10 for 9 MDL 9 and B or leave as 10 B as it is reported?

2010871-02A 1/100 =0 1/10= 1 1/2 = >200 so she reported 1/10 would you rather us combine 1/100 and 1/10 for 9 MDL 9 and B or leave as 10 B as it is reported?

2010871-03 1/100=0 1/10=0 1/2 had 3 she reported just detect on 1/2 would you rather we revised to be 300/61=4.9 MDL 2 B or leave as is?

Let me know if you want revise or leave as is. I still have pull more data and do full investigation it will be about 14 days and I will send you CAR. But if you wanted revision on these I wanted get started on that as well.

Thanks

I will look at history. If they were 2 or ND that would be ok but 10 seems odd I will review your FC results and see. I have meeting today at 11 then I am leaving for rest of the day on personal business. This will take time for me dig through so I will get back to you early next week. I will probably open CAR seeing as at least two report were effected and send you that as well when complete- roughly 14 days or so.

Okay. Can you take a look at the two reports attached? They each have a sample with a result of 10 B with a DF of 10. Was there no growth or TNTC on the 50 mL plates?

When reviewing these two more recent reports, I realized it's been a long time since we've received a report with results calculated from multiple plates (making the DF 1). The last one was from August of 2018. Does that sound right to you?

Thank you,

Kara

I do now recall you all having to use a DF of 1 if more than one plate was used in the result calculation.

When did the new analyst start? It does look like the more recent reports must have only been using a single plate for the calculation as the DF's are not 1.

Thank you,

Kara

We have always done it the same. Most of what you do now has been Entero and Ecoli which would use marine DF of 10 and computer would generate. ND DF would change as well because then it changes MDL automatically.
Like 1903343 1808180 was actually calculated with 3 plates there were more those just ones I opened up first in search. if it was 2 same thing etc. Hope that helps

Okay. Thank you for the responses. Let's just keep the fecal reporting as is. I don't want to make you guys have to do an extra step in report preparation and I don't want to introduce the potential for additional revisions.

How had you been calculating fecals before the new analyst was brought on board? All the more recent reports have the MDL and dilution factors matching.

Thank you,

Kara

**Subject:** Re: Analytical Report: DEP Fecals,2101903,1/25/2021

No because the MDL is whole number and if system has 1.6 MDL 2 then it will be ND so we change it to be 2 B.

I cannot have my lims only for you change to whole numbers it would change all micro and some of my clients want the decimal for some reason their EVR DEP rep has them report weird numbers I don't know why. It is not the same throughout state. Our auditor has accepted and said it was fine on last audit 2020 since it is what our SOP says we will do and she said most labs are going that direction when I asked her what people were doing these days.

For me to do this it would be manual change on each report. I wish I could say I could remember on just your reports. I can make autonote but they are small they dont really alert you. But with volume of reporting I do I would probably let quite a bit get through. I would change it anytime it slipped past me (if you email requested) and revise it. I do have keep log for all revisions but it isn't a ton extra work if you wish to go this direction.

DF cannot be changed. It is not same as MDL. MDL reflects your volume calculations. DF are when system multiples by that factor **automatically** if I was to change that to a 2 it take what she calculated and times it by 2 which is not what you want since this was combined plate calculation.

Let me know how you wish to proceed Thanks

**Subject:** RE: Analytical Report: DEP Fecals,2101903,1/25/2021

Oh, okay. I see what you mean when you say 'except <2 to show detect' since the final result for 2101903-001B was rounded, but wouldn't the absence of a 'U' qualifier do the same thing? Does it have something to do with your LIMS? You're right about there not being any clear guidance in the method about reporting to the whole number. For that reason, we decided not to include it in the Scope of Work. The method does talk about how reporting CFU's is more precise than MPN results. But, they go on to say different circumstances can affect precision and there is a range of confidence you put in the colony count. We would prefer it be reported as a whole number but I also don't want to make extra work for you. If you did, would it be a change you make to the final report or are you able to request that change from your LIMS?

Also, can you still update the dilution factors? They are all set at 1 in the revision.

Thanks Katie,

Kara

Okay. Thanks Katie.

Don't you guys normally run a 50, 10, and 1mL dilution series? I'm having trouble replicating the calculation for G1SD0110. Was the 50mL dilution for this one TNTC? A benchsheet may be helpful for this one.

Also, shouldn't the fecal result be rounded to the closest whole number? And, it looks like all the dilution factors for the revised fecals where changed to 1. They should follow the formula DF=100/(volume filtered).

Thank you,

Kara

It was calculated wrong. I have new tech and she took highest value dilution instead 3 plates added together (all plates were <20) so she is fixing and I will send revision Monday. Since I just validated the Entero at 1/10 I must have not registered it wasn't 1/10 coming off looking at marines and validated though it was fecal and needed calculated. Just a spacey thing on my end. Thanks

239-590-0337 O
Monday - Thursday : 8:30 am - 4:00 pm
Friday: 8:30 am - 1:00 pm
Saturday / Sunday: By appointment only
Closed Holidays

COVID-19 update: In order to do our part to reduce the spread we will have Bay/Suite 2 open and main office will be closed. Please leave your samples in the black fridge and COC in the bin on the cart. Make a copy of the COC for your records at your facility, get copies from client portal, or take picture with your phone we will not be making on site until the CDC space guidelines are removed. Call 239-590-0337 if you need one of our team to assist you with a mask. Call kit pickups in ahead and we will put your bottles in Bay 2 on the cart. Staff will remain at least 6 feet apart at all times in order to do our part to reduce the spread and protect you and your staff. Thank you for helping us meet CDC guidelines. As always our hearts with all of you.

Sanders will always match or beat any quoted price.

Good afternoon,

Could you please take another look at the fecal results here? They seem to be missing a B qualifier.

Thank you,

Abigail L. Baker
