These should be run as fresh because the Specific Conductivity was less than 5000 umhos.

Subject: RQ-2021-04-12-38 sample matrix

Hi there,

I have a question about some samples collected 4/14/21 for RQ-2021-04-12-38. G4NW0387 and G4NW0394 are both marked as brackish water on the UWF chain of custody, but fresh on the DEP field sheets. Can you let me know which matrix is more accurate to use for these samples?

Thank you,

Abigail
