Yes counting range is 200 so assumed you wanted that. Based on few emails from you guys. Plus very old guidance from you all. I will adjust to 60. You guys have your own contract guidelines so you do not get reported like my other clients because follow old guidance document. If you have new one please send on over I think mine was from 90s that is used as work guide for you account. I will update with new specs.

Thanks for choosing Sanders Labs,

Katie Strothman

Closed Holidays

COVID-19 update: In order to do our part to reduce the spread we will have Bay/Suite 2 open and main office will be closed. Service is contact-less. Please leave your samples in the black fridge and COC in the bin on the cart. Make a copy of the COC for your records at your facility, get copies from client portal, or take picture with your phone we will not be making on site. Call 239-590-0337 if you need one of our team to assist you with a mask. Call kit pickups in ahead and we will put your bottles in Bay 2 on the cart. Kit requests are typically 5 days out. We cannot provide kits without prior request. As always our hearts with all of you.

Hi Katie,

Thanks for the quick response. The maximum number of colonies acceptable for fecals is 60.

Kara

Sorry I followed your last email
If all plates are >200 or TNTC, you would calculate the result as: ((the maximum number of colonies acceptable)(100) / (the smallest filtration volume).
200*100/1=20000

Hi Katie,

The fecal result for G1SD0112 still does not follow the method.

If all plates are >200 or TNTC, you would calculate the result as: ((the maximum number of colonies acceptable)(100) / (the smallest filtration volume).

So, for this result, since the maximum number of colonies acceptable is 60, the result would be calculated as: ((60)(100)/1) = 6,000 cfu/100mL.

Can you also please send your SOP that includes your calculation methodology for fecals by membrane filtration?

Thank you,
Kara
