Yes, the correct time is 1100. The 1200 was in error.

I can look at it and get you a solid answer after I get back from the field today.

Hi Kelly,

I have a question about a sampling time for an ALS event collected 11/4. For field ID 19010076, the ALS coc has a sampling time of 11:00 but the DEP field sheets say 12:00. I know we had quite a few at this time where the field sheets were an hour off due to the time change. Can you confirm that this is the case here and the overflow coc has the correct time? FYI, the attached DEP submittal does contain documentation regarding time discrepancies but this sampling event is not one mentioned.

Sorry it's so long after the fact to be asking!

Thank you,

Kara
