Don et al –
Bill and Dave's presence are critical and we'd sure like to have George (George are you out there?).

I would much prefer to push up to early May than move to early April. I just rented a house in Mexico the week of April 4-11 (my kids spring break from school); and have another meeting the week of April 20. My May remains open so far, with the exception of still-to-be-scheduled field trips.

Since our audience is largely FL folks, I imagine Don will want to stay in FL. Perhaps we should go with Tallahassee?

Hi Cindy;

I view Bill's presence as being much more important than me, so his scheduling conflicts should take priority. Given his limitations, and looking at my calendar the first part of April and May are looking good right now. As for a site, I agree a USGS sponsored site would put some neutrality on the meeting. Ronnie, do you have a spot (conference room) where we could meet? I do believe 1.5 -2.0 days should be ample time to present and discuss this. I would really like to see what DeBusk and Gabriel have to say (i.e, get a commitment for a presentation on their findings) and have the opportunity to really discuss this without the anxiety and finger pointing that happened last time. To promote that, I would like to suggest we try to keep extraneous (lawyers) out of the room, but this may require an out of state site to avoid the Sunshine State rules.

Dave

Cindy:
I hate to be the problem child. I plan to be in eastern Europe for fieldwork from April 13-30. This could change depending on us getting permission to enter Bosnia and Kosovo, but that is the current plan. May is pretty open for me at this point, as is the very early part of April. I have a cruise the last week of March.

Spring S workshop

Just an FYI, it looks like we will try and hold the FL S workshop – the result of all the data compilation effort – the week of April 27.

Don and I are thinking 1.5 day meeting. Exact dates haven't been picked yet, although folks would like to avoid Monday.

The idea is to give District, State and EPA people a chance to look are our full data sets and conclusions ahead of the meeting… and then present in person and give people the chance to answer questions. The meeting would also include presentations from DeBusk (on whatever data they have compiled from their new study); Gabriel's S budgeting effort, and any other work that we or others think should be included, possibly some of the book chapter??

Are you guys available that week??

Any ideas on location and meeting structure…. West Palm makes sense to take advantage of District facilities; although a USGS-sponsored location might be better?? Your thoughts… ?

Thanks – Cindy
