Mark,

Nice work!

I have not read Pam Lehr's entire "**Draft Notes from the Second Annual Workshop on Mercury and Sulfur in South Florida Wetlands"**, but did read a couple seminar synopses.

As such, I think you should consider following up on your Email with a request that those who presented seminars may if they wish suggest edits or expansions on Pam's summary of their presentations. (Denise Miller did this last year with her Hg and S workshop summary.)

In particular, I thought that the summary of Dave Krabbenhoft's presentation should be expanded. Pam's summary does not convey clearly that changing Army Corps water delivery practices resulted in a sharp decline in SO4 at former MeHg hot spot 3A-15 in the late 1990's, which not only increased Hg/DOC ratios (and thus may have reduced Hg available for methylation) but also almost certainly reduced SRB production of MeHg; an alternative hypothesis that reductions in Hg atm dep resulted in MeHg declines is not supported by MDN data.

Don

Subject: Second Annual Workshop on Mercury and Sulfur in South Florida Wetlands website and summary

Dear Colleagues,

I would like to extend my thanks to all who helped organize, moderate and participate in the *Second Annual Workshop on Mercury and Sulfur in South Florida Wetlands,* which was held at the South Florida Water Management District, June 11-12, 2009.

Overall, this was a highly successful and productive workshop. A diverse set of talks were presented on the fate, transport, biogeochemistry and wetland toxicity impacts of mercury and sulfur. Each day was followed by two-hour summary discussions from which a fact sheet/technical publication will result in the upcoming months.

Attached is a workshop summary which also contains an attendee list.

Below is a link to the workshop website that contains each presentation.

If you have any problems with this link you can use the following path: www.sfwmd.gov > "What we Do" > Environmental Monitoring > Workshops and Presentations

If you have any questions please let me know and once again thank you for your participation.
