

SOUTH FLORIDA WATER MANAGEMENT DISTRICT

EVERGLADES WORKS OF THE DISTRICT EAA BASIN PERMIT NO. 50-00010-E

Issued To: South Florida Conservancy District
Attention: Mr. David Davis
P.O. Box 969
Belle Glade, FL 33430

Application Number: 141013-29
Permit Type: Administrative Update
Date of Expiration: June 30, 2017

Project Description: Implementation of an approved Best Management Practices Plan for phosphorus in discharges as described in the attached Everglades Works of the District Staff Report.

Everglades Basin: Everglades Agricultural Area (EAA)
Locations: Palm Beach County, Hendry County

This is to notify you of the South Florida Water Management District's (District) agency action concerning the referenced permit application. This action is taken pursuant to the provisions of Chapter 373, Part IV, Florida Statutes (F.S.) and Chapter 40E-63, Florida Administrative Code (F.A.C.).

Based on the information provided, District rules for issuance have been met and the Everglades Works of the District Permit is granted for this application subject to:

1. Not receiving a filed request for a Chapter 120, F.S., administrative hearing or a judicial review pursuant to Section 120.68, F.S.;
2. The filed application, including all plans and specifications, and the attached Everglades Permit Review Summary (Staff Report); and
3. The attached standard limiting and special conditions.

Should you object to these conditions, please refer to the attached "Notice of Rights" which addresses the procedures to be followed. Please contact this office if you have questions concerning this matter.

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that this written notice has been mailed or electronically transmitted to the Permittee (and the persons listed in the attached distribution list) this 2nd day of March, 2015 in accordance with Section 120.60(3), F.S. Notice was also electronically posted on this date through a link on the home page of the District's web site to the ePermitting website (www.sfwmd.gov/ePermitting).

Enclosures

NOTICE OF RIGHTS

As required by Sections 120.569(1), and 120.60(3), Fla. Stat., the following is notice of the opportunities which may be available for administrative hearing or judicial review when the substantial interests of a party are determined by an agency. Please note that this Notice of Rights is not intended to provide legal advice. Not all the legal proceedings detailed below may be an applicable or appropriate remedy. You may wish to consult an attorney regarding your legal rights.

RIGHT TO REQUEST ADMINISTRATIVE HEARING

A person whose substantial interests are or may be affected by the South Florida Water Management District's (SFWMD or District) action has the right to request an administrative hearing on that action pursuant to Sections 120.569 and 120.57, Fla. Stat. Persons seeking a hearing on a SFWMD decision which does or may affect their substantial interests shall file a petition for hearing with the District Clerk within 21 days of receipt of written notice of the decision, unless one of the following shorter time periods apply: 1) within 14 days of the notice of consolidated intent to grant or deny concurrently reviewed applications for environmental resource permits and use of sovereign submerged lands pursuant to Section 373.427, Fla. Stat.; or 2) within 14 days of service of an Administrative Order pursuant to Subsection 373.119(1), Fla. Stat. "Receipt of written notice of agency decision" means receipt of either written notice through mail, electronic mail, or posting that the SFWMD has or intends to take final agency action, or publication of notice that the SFWMD has or intends to take final agency action. Any person who receives written notice of a SFWMD decision and fails to file a written request for hearing within the timeframe described above waives the right to request a hearing on that decision.

FILING INSTRUCTIONS

The Petition must be filed with the Office of the District Clerk of the SFWMD. Filings with the District Clerk may be made by mail, hand-delivery, or e-mail. **Filings by facsimile will not be accepted after October 1, 2014.** A petition for administrative hearing or other document is deemed filed upon receipt during normal business hours by the District Clerk at SFWMD headquarters in West Palm Beach, Florida. Any document received by the office of the District Clerk after 5:00 p.m. shall be filed as of 8:00 a.m. on the next regular business day. Additional filing instructions are as follows:

- Filings by mail must be addressed to the Office of the District Clerk, P.O. Box 24680, West Palm Beach, Florida 33416.
- Filings by hand-delivery must be delivered to the Office of the District Clerk. **Delivery of a petition to the SFWMD's security desk does not constitute filing. To ensure proper filing, it will be necessary to request the SFWMD's security officer to contact the Clerk's office.** An employee of the SFWMD's Clerk's office will receive and file the petition.
- Filings by e-mail must be transmitted to the District Clerk's Office at clerk@sfwmd.gov. The filing date for a document transmitted by electronic mail shall be the date the District Clerk receives the complete document. A party who files a document by e-mail shall (1) represent that the original physically signed document will be retained by that party for the duration of the proceeding and of any subsequent appeal or subsequent proceeding in that cause and that the party shall produce it upon the request of other parties; and (2) be responsible for any delay, disruption, or interruption of the electronic signals and accepts the full risk that the document may not be properly filed.

INITIATION OF AN ADMINISTRATIVE HEARING

Pursuant to Rules 28-106.201 and 28-106.301, Fla. Admin. Code, initiation of an administrative hearing shall be made by written petition to the SFWMD in legible form and on 8 and 1/2 by 11 inch white paper. All petitions shall contain:

1. Identification of the action being contested, including the permit number, application number, SFWMD file number or any other SFWMD identification number, if known.
2. The name, address and telephone number of the petitioner and petitioner's representative, if any.
3. An explanation of how the petitioner's substantial interests will be affected by the agency decision.
4. A statement of when and how the petitioner received notice of the SFWMD's decision.
5. A statement of all disputed issues of material fact. If there are none, the petition must so indicate.
6. A concise statement of the ultimate facts alleged, including the specific facts the petitioner contends warrant reversal or modification of the SFWMD's proposed action.
7. A statement of the specific rules or statutes the petitioner contends require reversal or modification of the SFWMD's proposed action.
8. If disputed issues of material fact exist, the statement must also include an explanation of how the alleged facts relate to the specific rules or statutes.
9. A statement of the relief sought by the petitioner, stating precisely the action the petitioner wishes the SFWMD to take with respect to the SFWMD's proposed action.

A person may file a request for an extension of time for filing a petition. The SFWMD may, for good cause, grant the request. Requests for extension of time must be filed with the SFWMD prior to the deadline for filing a petition for hearing. Such requests for extension shall contain a certificate that the moving party has consulted with all other parties concerning the extension and that the SFWMD and any other parties agree to or oppose the extension. A timely request for extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

If the SFWMD takes action with substantially different impacts on water resources from the notice of intended agency decision, the persons who may be substantially affected shall have an additional point of entry pursuant to Rule 28-106.111, Fla. Admin. Code, unless otherwise provided by law.

MEDIATION

The procedures for pursuing mediation are set forth in Section 120.573, Fla. Stat., and Rules 28-106.111 and 28-106.401-.405, Fla. Admin. Code. The SFWMD is not proposing mediation for this agency action under Section 120.573, Fla. Stat., at this time.

RIGHT TO SEEK JUDICIAL REVIEW

Pursuant to Sections 120.60(3) and 120.68, Fla. Stat., a party who is adversely affected by final SFWMD action may seek judicial review of the SFWMD's final decision by filing a notice of appeal pursuant to Florida Rule of Appellate Procedure 9.110 in the Fourth District Court of Appeal or in the appellate district where a party resides and filing a second copy of the notice with the District Clerk within 30 days of rendering of the final SFWMD action.

Last Date for Agency Action: May 3, 2015

**SOUTH FLORIDA WATER MANAGEMENT DISTRICT
EVERGLADES WORKS OF THE DISTRICT**

STAFF REPORT

GENERAL INFORMATION

Basin:	Everglades Agricultural Area	Permit No:	50-00010-E
Project Name:	South Florida Conservancy District	Application No:	141013-29
Location:	Palm Beach	Permit Type:	Individual
Permittee:	South Florida Conservancy District Attn: David R Davis P O Box 969 Belle Glade, FL 33430-0896	Application Type:	Administrative Update
Total Project Area:	31,945.98 acres		
No. Of Water Control Structures:	10		

PURPOSE

The purpose of this application is to update an Everglades Works of the District Permit (Chapter 40E-63, F.A.C.) within the Everglades Agricultural Area. This permit approves the implementation of a Best Management Practices (BMP) Plan and a water quality Discharge Monitoring Plan. The BMP implementation requirements, performance measures, and compliance methodology established in this permit pertain to phosphorus only. "Permittee" within this permit refers to all landowners, lessees, and operators responsible for compliance with the terms and conditions of the permit and are listed under the Administrative Information section of this Staff Report.

Revisions concurrent with this Administrative Update are described in the Other Permit Information section of this Staff Report.

The total permitted area encompasses 31,945.98 total acres divided among 4 farms or drainage basin areas (Basin IDs), which ultimately discharge off-site to the following Works of the District:

Hillsboro Canal
North New River Canal
Miami Canal

STAFF RECOMMENDATION

Staff recommends approval of the Everglades Works of the District Permit Application described in this Staff Report subject to the enclosed conditions. Based on the information provided, South Florida Water Management District rules have been met.

BACKGROUND - HISTORIC INFORMATION ON PERMIT AREA

Basin ID	Associated Permits	Authorization
50-010-03	50-00887-W	Application No. 090114-9 authorizes the continuation of existing use of surface water from the L-14, L-20, L-25, and the Industrial Canals for agricultural and landscape irrigation serving 29,480 acres.
	50-00881-W	Application No. 090114-9 authorizes the continuation of existing use of surface water from the L-14, L-20, L-25, and the Industrial Canals for agricultural and landscape irrigation serving 29,784 acres.
50-010-04	50-00787-S	Application No. 07090-B authorizes the construction and operation of a water management system serving 11.52 acres of residential land by swales, off-site canal, culverts, 1-24" and 1-36" flashboard risers and 2 CMP culverts discharging into a SFCD canal.
	50-01646-W	Application No. 100914-4 authorizes the continuation of an existing use of groundwater from the water table aquifer for industrial water supply serving a sugar mill.
	50-00254-W	Application No. 980209-2 authorizes the continuation of an existing use of groundwater from the surficial aquifer system for industrial use serving 2.46 acres.
	50-02498-S	Application No. 910625-7 authorizes the construction and operation of a water management system serving 39.5 acres of institutional lands discharging into SFCD Lateral 2-2.
50-010-06	50-06442-P	Application No. 031027-17 authorizes the operation of the SFCD surface water management system improvements, which are being proposed as part of the long term goal to divert 80 percent of the average annual volume of stormwater and phosphorus load historically pumped directly to Lake Okeechobee, pursuant to the Everglades Forever Act (Section 373.4592 Florida Statutes).
50-010-04 50-010-06	50-00887-W	Application No. 090114-9 authorizes the continuation of existing use of surface water from the L-14, L-20, L-25, and the Industrial Canals for agricultural and landscape irrigation serving 29,784 acres.

EXISTING / PROPOSED ACTIVITIES

Crop Type/Land Use	Estimated Acreage	Additional Information
Mixed Agriculture	28,068	Includes sugarcane, vegetables, citrus, and pasture
Urban and Built-up	3,741	

HISTORIC ACTIVITIES

Crop Type/Land Use	Estimated Acreage	Additional Information
Mixed Agriculture	28,488	
Urban and Built-up	3,321	

OTHER PERMIT INFORMATION

Current Application No. 141013-29: United States Sugar Corporation purchased three parcels of land totaling 266.61 acres from Triple S. Holdings Ltd., effective September 22, 2014. This application updates ownership and operator information for the relevant parcels. Updates to landowner, operator, parcel control number, and acreage were made for other parcels where applicable. In particular please note:

1. Eight non-agricultural parcels were identified as being covered under the National Pollutant Discharge Elimination System (NPDES) Permit for the city of Belle Glade. These parcels are part of the hydrologic drainage area for the Basin IDs and continue to be included in this permit. However, they are no longer listed individually. They are represented by the "Parcels Under an NPDES Permit" in the Administrative Information section of this Staff Report, and the BMPs required for the reduction of phosphorus are those indicated in NPDES permit No. FLS000018.

2. Eight non-agricultural parcels were designated as "Not a Participant" in the Administrative Section of this Staff Report. These parcels were identified as being qualified for a General Permit under subsection 40E-63.120(2), F.A.C. These parcels are part of the hydrologic system for the Basin IDs, therefore, their acreage will continue to be listed in this permit. However, landowners are not participants of this individual permit.

Additionally, HC15.5TS was updated to reflect two pumps with a capacity of 224,032 gallons per minute (GPM), and EPD-07 was updated to reflect four pumps with a capacity of 336,702 GPM.

BEST MANAGEMENT PRACTICES (BMP) PLAN

SITE & DRAINAGE SYSTEM DESCRIPTION

The South Florida Conservancy District (SFCD) is responsible for providing drainage and irrigation water for the areas within its boundaries. It does this through maintaining and operating a series of primary canals and ten pump structures. According to the associated permits, the SFCD is able to discharge water to, or withdraw water from, the canals maintained by the SFWMD (North New River, Hillsboro, and Miami Canals). The ten structures are located in four farm basins: Units 1 & 2, Zone 8 Farm L, and Farm G (Basin ID 50-010-02) contains structures HC15.5TS, NR26.4TE, and HC19.6TS, ; Unit 3 (Basin ID 50-010-03) contains structures MC24.1TE and NR25.2TW; Unit 6 (Basin ID 50-010-04) contains structures HC22.5TN and HC19.7T; and Unit 5 and S-236 (Basin ID 50-010-06) contains structure MC25.7TW, and Lake Okeechobee structures S-236 and P-5-W, aka EPD-07 (monitored under 40E-61 permit No. 50-00001-E).

A triangular-shaped area of Unit 3 (Basin ID 50-010-03) bordered on the west by the Miami Canal and on the east by the South Shore Drainage District's (SSDD) Bean City sub-basin (Basin ID 50-081-02, WOD Permit No. 50-00081-E) includes lands that are within the SFCD jurisdiction but are drained by SSDD and permitted under the referenced SSDD WOD permit.

The upstream on-farm water management systems vary for each individual land parcel within the described pumping units. The on-farm water management generally consists of interconnecting field ditches, lateral canals, and collector canals. The individual farming blocks are drained by field ditches that discharge to the laterals bordering each block. Ultimate discharge to the SFCD infrastructure is from the collector canals via water control structures consisting of small pumps and gates, to open culverts and ditches.

OVERALL BMP PLAN REQUIREMENTS

Approximately 10,116 acres within Basin ID 50-010-06 is also regulated under the Chapter 40E-61, F.A.C., Lake Okeechobee Works of the District Master Permit No. 50-00001-E.

This permit includes three types of permittees responsible for implementing certain BMPs, as listed in the Administrative Information section of this Staff Report and described below:

- 1.- The SFCD (298 District) which is responsible for providing drainage and irrigation for the agricultural and urban areas within its boundaries.
- 2.- The agricultural "individual permittee" who has signed a Certificate of Participation and Landowner Agreement with the SFCD. The SFCD and individual permittees are responsible for keeping Certificates of Participation and Landowner Agreements current.
- 3.- The cities of Belle Glade and South Bay which have signed a Certificate of Participation and Landowner Agreement with the SFCD and are included in the National Pollutant Discharge Elimination System (NPDES) Permit. The specific acreage covered under the NPDES permit for the cities of Belle Glade and South Bay is listed in the Administrative Information section of this Staff Report.

The parcel acreage that qualifies for a General Permit under subsection 40E-63.120(2), F.A.C., is listed in the Administrative Information section of this Staff Report to account for the total acreage that falls within the SFCD boundaries. The terms and conditions of this permit do not apply to these parcels. The detailed property ownership information for these parcels is on file with the SFWMD.

Except as noted above, the SFCD and each permittee named within this permit is responsible for complying with the terms and conditions of this permit, including implementation of the BMP Plan within its acreage identified in the Administrative Information section, for maintaining records at its office, and preparing a BMP Annual Implementation Report of its BMP implementation for submittal to SFWMD as further described below.

BMP Plan:

Each BMP Plan is summarized in Exhibit 1 and includes a minimum of 25 equivalent BMP points. Each BMP shall be implemented consistently across all acreage for which that BMP was selected. BMP Plans shall adequately address the following for each BMP: (1) implementation schedule, (2) staff training, and (3) documentation/reporting.

The 298 District controls the ultimate discharge from the area served, but not necessarily the practices on each land parcel. The 298 District and each individual permittee will be responsible for implementation of BMPs.

The 298 District shall implement water management and sediment control BMPs. The 298 District has provided reasonable assurance that the 1.0 inch of detention can be provided within Basin IDs 50-010-03, 50-010-04, and 50-010-06 by managing and controlling runoff to minimize off-site discharge through higher water table management at the seven primary pumping structures (MC24.1TE, NR25.2TW, HC19.7TN, HC22.5TN, MC25.7TW, S-236, and EPD-07); and 0.5 inch of detention can be provided within Basin ID 50-010-02 at the three primary pumping structures (HC15.5TS, HC19.6TS, and NR26.4TE). The 298 District will also implement and maintain two (2) particulate matter and sediment control practices as listed in Exhibit 2.

Individual permittees within Basin IDs 50-010-03, 50-010-04, and 50-010-06 shall implement water management practices, nutrient control practices, and a minimum of two (2) particulate matter and sediment control practices as listed in Exhibit 2. Water management practices shall be consistent with the 298 District's 1.0 inch detention BMP. Individual permittees with control structures for off-site discharges shall implement water management practices to detain the first 1.0 inch of rainfall.

Individual permittees within Basin ID 50-010-02 shall implement water management practices, nutrient control practices, and a minimum of four (4) particulate matter and sediment control practices as listed in Exhibit 2. Water management practices shall be consistent with the 298 District's 0.5 inch detention BMP. Individual permittees with control structures for off-site discharges shall implement water management practices to detain the first 0.5 inch of rainfall.

Portions of the Cities of Belle Glade and South Bay (Cities) are located within the WCD service area. As specified in the inter-local agreement, the Cities are participants under this permit. The Cities, along with others in Palm Beach County, are required to implement storm water management programs to reduce pollutants in storm water runoff. The District will coordinate separately with the Cities regarding BMP implementation for nutrients described in the FDEP storm water management program and provisions set forth in Parts I-VIII of the National Pollutant Discharge Elimination System (NPDES) Permit.

Descriptions of individual BMPs approved for implementation are included in the BMP Plan Implementation and Reporting Requirements section of this Staff Report. Each permittee is responsible for training and informing its appropriate staff, operators, or contractors of permit requirements and compliance conditions. Implementation will be verified by the SFWMD through review of BMP Annual Implementation Reports submitted as provided below and on-site observations of operations and documentation, as applicable.

Documentation and Reporting:

Each permittee shall keep records documenting implementation of BMPs on file at its respective office and have them readily available for review by SFWMD during on-site verification of BMPs, as applicable. A BMP Annual Implementation Report shall be filed each year with SFWMD.

The 298 District shall compile theirs and all individual permittee reports and submit one comprehensive BMP Annual Implementation Report to the SFWMD. Failure of any individual permittee to provide its BMP Annual Implementation Report to the 298 District for filing with SFWMD or failure of any individual permittee to comply with permit terms and conditions shall be addressed directly by SFWMD with that permittee.

BMP PLAN IMPLEMENTATION AND REPORTING REQUIREMENTS**BMP Name: Nutrient Application Control**

BMP Description: This BMP shall be implemented by individual permittees. Nutrient application control is to be accomplished by uniform and controlled boundary application of phosphorus through direct application to the root zone using banding/side-dressing or using pneumatic, controlled-edge application. Application areas are to be set back from canals with no overlapping applications.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. An explanation shall be recorded in the permittee's records if phosphorus was applied to an area within the Basin ID without practicing controlled application. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Nutrient Spill Prevention

BMP Description: This BMP shall be implemented by individual permittees. Formal practices and protocols shall be established by each permittee as to the handling and placement of nutrients, storage and disposal of nutrient containers, and nutrient transfer within the Basin ID. Any nutrient spill at an individual Basin ID shall be cleaned up immediately, and the date and circumstances of each spill documented in records kept at the corresponding permittee's office.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. The annual implementation report provided to SFWMD shall include the following: 1) a summary of routine nutrient spill prevention practices implemented by the applicator, 2) the number of spills, if any, and clean-up actions taken, 3) the date and circumstances of each spill, and 4) a summary of future actions to be taken to prevent spill recurrences. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Soil Testing

BMP Description: This BMP shall be implemented by individual permittees. The goal of this BMP is to avoid excess nutrient application by determining phosphorus requirements of the soil and following standard recommendations for application rates (crop specific). Soil samples shall be collected and reviewed prior to application for the acreage in production. Soil phosphorus analysis results shall be used to improve the accuracy of phosphorus application rates and reduce over-application of phosphorus.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. The permittee will be responsible for obtaining and reviewing soil test results on its Basin ID prior to nutrient application and for using these results as a guideline for phosphorus application for all crops requiring phosphorus. The permittee will keep at its office the records of areas tested, crops grown, test results, nutrient application recommendations, and nutrient application rates. Where actual phosphorus application rate or quantity varies from soil test recommendations, the permittee will keep notes to explain the logic for all variations. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Particulate Matter and Sediment Controls (4)

BMP Description: This BMP shall be implemented by both the SFCD and the individual permittees within Basin IDs 50-010-03, 50-010-04, and 50-010-06. Each (SFCD and individual permittees) shall implement two (2) particulate matter and sediment control practices from Exhibit 2 consistently across all lands for which the BMP was selected. The purpose of this BMP is to prevent or minimize the transport of phosphorus off-site with particulate matter and sediments.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. Documentation of implementation kept at the individual permittee's office shall include a description and the location of the particulate matter and sediment controls that have been implemented and a description of all maintenance and operations conducted to sustain the BMP's effectiveness. The permittee's office records shall also include an explanation of any changes from the approved BMP implementation, maintenance, and operation. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of theirs and the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Particulate Matter and Sediment Controls (6)

BMP Description: This BMP shall be implemented by both the SFCD and the individual permittees within Basin ID 50-010-02. The SFCD shall implement two (2) particulate matter and sediment control practices from Exhibit 2 consistently across all lands for which the BMP was selected. Individual permittees shall implement four (4) particulate matter and sediment control practices from Exhibit 2 consistently across all lands for which the BMP was selected. The purpose of this BMP is to prevent or minimize the transport of phosphorus off-site with particulate matter and sediments.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. Documentation of implementation kept at the individual permittee's office shall include a description and the location of the particulate matter and sediment controls that have been implemented and a description of all maintenance and operations conducted to sustain the BMP's effectiveness. The permittee's office records shall also include an explanation of any changes from the approved BMP implementation, maintenance, and operation. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of theirs and the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Water Management (0.5-inch)

BMP Description: Water management practices shall be implemented by both the SFCD and the individual permittees within Basin ID 50-010-02. Implementation of this BMP requires managing and controlling runoff. Storage of water is accomplished by delayed discharge practices based on daily rainfall measurements or critical water table elevations. Storage requirements shall be met via on-site canal and soil storage not previously used. Implementation of water management practices associated with this BMP should not conflict with discharge practices authorized under applicable Environmental Resource Permits (ERP) or other surface water management permits.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. Office records may include a description of BMP operational procedures to provide the required on-site detention or water management. Office records shall include a description of information and rationale for starting and stopping off-site discharge (e.g., daily rain gauge readings, observations and measurement of upper [critical freeboard depth] and lower water table elevations, harvest and planting water table elevations). The established discharged control criteria are summarized in Exhibit 4. Field logs shall include an explanation for discharge events initiated prior to the established discharge control criteria. The office records shall include an explanation of any changes from the approved BMP operation. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of theirs and the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Water Management (1-inch)

BMP Description: Water management practices shall be implemented by both the SFCD and the individual permittees within Basin IDs 50-010-03, 50-010-04, and 50-010-06. Implementation of this BMP requires managing and controlling runoff. Storage of water is accomplished by delayed discharge practices based on daily rainfall measurements or critical water table elevations. Storage requirements shall be met via on-site canal and soil storage not previously used. Implementation of water management practices associated with this BMP should not conflict with discharge practices authorized under applicable Environmental Resource Permits (ERP) or other surface water management permits.

BMP Reporting: Office records shall be retained by the permittee documenting the verification. Office records may include a description of BMP operational procedures to provide the required on-site detention or water management. Office records shall include a description of information and rationale for starting and stopping off-site discharge (e.g., daily rain gauge readings, observations and measurement of upper [critical freeboard depth] and lower water table elevations, harvest and planting water table elevations). The established discharged control criteria are summarized in Exhibit 4. Field logs shall include an explanation for discharge events initiated prior to the established discharge control criteria. The office records shall include an explanation of any changes from the approved BMP operation. The individual permittees shall provide to the SFCD an annual implementation report verifying BMP implementation. The SFCD shall submit a compilation of theirs and the individual permittees' annual implementation reports to the SFWMD.

BMP Name: Phosphorus BMPs described in the NPDES Permit No. FLS000018

BMP Description: This applies only to specific non-agricultural entities identified in the NPDES Permit and under the Administrative Information section of this Staff Report. The NPDES Permit describes the BMPs for the reduction of phosphorus.

BMP Reporting: The SFWMD will verify with FDEP the status of NPDES phosphorus reporting requirements.

DISCHARGE MONITORING PLAN

OVERALL DISCHARGE MONITORING PLAN DESCRIPTION

The discharge monitoring plan shall provide reasonable assurance that the water quality and quantity are accurately documented. In support of this effort, the SFCD is required to have SFWMD-approved flow calibrations for each discharge structure. Flow quantity is required to be verified or re-calibrated by methods and at frequencies provided in the SFWMD "Calibration Guidelines". Additionally, each discharge site shall be audited by SFWMD representatives for quality assurance of field sample collection procedures.

The discharge from the former Unit 5 (Basin ID 50-010-05) and the diversion area (S-236 area) will not be monitored independently; the former Unit 5 (Basin ID 50-010-05) became inactive for individual load calculation and individual tax credit determination when the new basin (Basin ID 50-010-06) (Unit 5 and S-236) became effective.

The Unit 5 and S-236 (Basin ID 50-010-06) has one primary discharge structure to the EAA, structure MC25.7TW, and two secondary structures, structure EPD-07 to the Industrial Canal and structure S-236, to Lake Okeechobee. This permit establishes monitoring requirements for the EAA primary structures. The permittee has stated that the secondary structures will be used during emergency situations only. During discharges through the secondary structures, water quality grab samples shall be collected at structures EPD-07 and S-236 at least daily, composited, and preserved as indicated in the Environmental Resource Permit (ERP) No. 50-06442-P, Application No. 031027-17. As indicated in ERP No. 50-06442-P, if at some point in the future the District determines that the use of grab sample collection is insufficient to adequately represent flow at structures EPD-07 and S-236, the permittee shall initiate within 30 days a daily monitoring program for total phosphorous concentration using flow proportional automatic samplers (with grab sample as a temporary back-up only).

The former Basin ID 50-061-20 served, by structure HC15.5TS-E (open culvert) has been hydrologically connected to Basin ID 50-010-02 at the time of this permit renewal. The former Basin ID 50-061-20 discharges into the Hillsboro Canal via structure HC15.5TS (Basin ID 50-010-02). Total phosphorous concentration and total flow from the former Basin ID 50-061-20 and the remainder of Basin ID 50-010-02 are measured at structure HC15.5TS as required by the Water Quality Monitoring Plan. The unit area phosphorous load is calculated from the phosphorous concentration measured at structure HC15.5TS divided by the entire acreage of the new Basin ID 50-010-02.

The SFCD and each permittee within the Basin ID that discharges through a controlled drainage structure must have rainfall measurement equipment installed at a representative location. The rainfall data collected will be required to document and verify implementation of the water detention BMP for each site. The site-specific data shall be recorded on field data logs for each site and will be maintained on-site and readily available for review by SFWMD during BMP site verifications or at the time of flow calculation verifications. Representative rainfall data shall accompany the water quality data submitted monthly for structures HC15.5TS, HC19.6TS, HC19.7TN, HC22.5TN, MC24.1TE, MC25.7TW, NR25.2TW, and NR26.4TE (SFCD structures).

The SFWMD has agreed to share the water monitoring sampling results with the SFCD with the conditions indicated in a "Data Sharing" agreement for structure MC25.7TW only. To conduct this, the SFCD has provided access to collect samples indicated in a "Right of Entry" agreement.

Staff gauge readings at the SFCD structures must be recorded by SFCD on field logs a minimum of twice daily during discharge events at approximately the same times each day to ensure backup data for accurate flow calculations. Methodology for calculating quantity discharged will be based on an approved calibration for each pump and the daily electronic or manual logs for operation. This methodology will be verified through routine on-site verifications of implementation of the BMP Plan and the Water Quality Monitoring Plan, and will require submittal of documentation (logs) to SFWMD.

The goal of the Diversion Project is to divert, on a long-term average basis, 80% of the volume (and load) historically discharged directly to Lake Okeechobee by the Diversion Project area. Beginning in 2006, by July 1 of each year, the applicant shall submit discharge volume and phosphorous loading data for the previous period (calendar year) of operation to the 80% diversion goal. The diversion evaluation shall consider the flow from the SFCD area that historically discharged directly to Lake Okeechobee through structure S-236 and directly to the Industrial Canal through structure EPD-07. Diversion structure MC25.7TW serves Unit 5 and S-236 (Basin ID 50-010-06), a total of 10,497 acres, of which 2,111 acres previously discharged directly to the EAA through structure MC26.1TW. The 2,111 acres are not considered as part of the Diversion Project, so the actual diversion area served by structure MC25.7TW is 8,386 acres. The evaluation shall calculate the total flow volume and phosphorus load discharged to the Lake through structures S-236 and EPD-07 for the SFCD diversion area only. The goal is a ratio of no less than 0.80 (an 80% diversion of volume and load). For the first three years, the evaluation was required to consider all available

data. The fourth and each subsequent annual evaluation shall consider data for the current 3-year period (3-year rolling period). Each completed diversion annual report shall include the basis for the calculations and the following, as applicable, if the goal is not met:

- 1) A description of operational limitations that affected the permittee's ability to meet the goal; and
- 2) Identification of specific measures (including possible modifications to the ERP Operating Permit) that will be implemented to meet the diversion goal, along with a timetable for implementing these measures.

LABORATORY AND SAMPLER INFORMATION

Laboratory Name: Short Environmental Labs	Structure ID:		
HRS Certification Number: E85458	EPD-07	HC15.5TS	HC19.6TS
Sample Collector: Mike Lockhart	HC19.7TN	HC22.5TN	MC24.1TE
Field Sampling QA Plan No: 930208	MC25.7TW	NR25.2TW	NR26.4TE
Field Sampling QA Plan Holder: Lockhart Ag Technologies	S-236		

SAMPLE COLLECTION INFORMATION

Sampling Method (FPFW): Automatic Sampler - Flow Proportional/Flow Weighted

During periods of off-site discharge, water quality composite samples shall be collected according to the method specified below, preserved, and the composite sample shall be: a) removed from the sample-collection site and delivered to the laboratory no later than 21 days from the time the first individual sample was taken, and b) analyzed for total phosphorus no later than 28 days from the time the first individual sample was taken. In the event that water quality automatic sampling equipment becomes inoperable for any reason, grab samples will be taken temporarily on a daily basis and composited for total phosphorus analysis. Reasonable efforts must be made to render the automatic sampling equipment operable as quickly as possible.

MC25.7TW

Sampling Method (GRAB): Manual Grab Samples

During periods of off-site discharge, water quality grab samples shall be collected at least daily, composited, preserved, and the composite sample shall be: a) composited for no more than 14 days from the time the first individual sample was taken, b) delivered to the laboratory, and c) analyzed for total phosphorus no later than 28 days from the time the first individual sample was taken.

EPD-07 S-236

Sampling Method (TPTW): Automatic Sampler - Time Proportional/Time Weighted

During periods of off-site discharge, water quality composite samples shall be collected according to the method specified below, preserved, and the composite sample shall be: a) removed from the sample-collection site and delivered to the laboratory no later than 21 days from the time the first individual sample was taken, and b) analyzed for total phosphorus no later than 28 days from the date the first individual sample was taken. In the event that the water quality automatic sampling equipment becomes inoperable for any reason, grab samples will be taken temporarily on a daily basis and composited for total phosphorus analysis. Reasonable efforts must be made to render the automatic sampling equipment operable as quickly as possible.

WATER QUANTITY (FLOW)**Water Quantity Calibrated:**

It is important to note with regard to quantity of discharge from a structure referenced in this EWOD permit, that the SWM/ERP permit authorizes the maximum quantity of discharge allowed to Works of the District. This EWOD permit only approves the BMP and Discharge (Water Quality) Monitoring Plan related to that discharge. The maximum calibrated capacity referenced in this permit is the peak discharge rate under specific operating conditions certified by a Florida-registered Professional Engineer. The maximum allowable discharge is limited by the SWM/ERP permit authorization regardless of the calibrated capacity referenced herein. The authorizations of other related District permits are summarized within the section titled "Associated Permits" for convenience only.

With regard to the calibrated capacity, Chapter 40E-63, F.A.C., requires all water quality monitoring plans to provide reasonable assurance that annual water discharge and total phosphorus load are accurately documented (subsection 40E-63.136(2) and paragraph 40E-63.156(1)(a), F.A.C.). In response to numerous requests by permittees, the SFWMD Everglades Regulation Bureau has prepared, through a public participation process, guidelines for flow calibration. The guidelines represent a compendium of knowledge from several professionals (internal and external to the SFWMD) who have advanced experience in the area of flow calibration. These guidelines may be updated from time to time as better techniques for calibration and flow analysis become known. Input from a number of experts, including representatives of all permit holders, will be sought in any adjustment of the guidelines. All permit holders will be notified of any proposed changes in guidelines and allowed an opportunity for review and comment.

The guidelines are a collection of methods which outline the components of flow calibration and measurements which, if followed, generally provide the reasonable assurance of accurate measured flow required by subsection 40E-63.136(2), F.A.C. The components of flow calibration and measurements outlined in the guidelines do not necessarily reflect all the possible flow circumstances within the EAA. Some unique situations may merit/necessitate the use of procedures that deviate from those outlined in the guidelines. To facilitate the SFWMD's technical review and acceptance (as authorized by subsection 40E-63.136(2), F.A.C.) of any submitted flow calibration, each calibration must provide the reasonable assurance for accurate measurement required by subsection 40E-63.136(2), F.A.C. It is suggested that the permittee submit any such proposed deviation in writing to the SFWMD for review in advance of the proposed implementation or deviation of calibration procedures to facilitate a timely review process.

METHODOLOGY FOR CALCULATING TOTAL PHOSPHORUS LOAD

The total phosphorus load entering the receiving system will be calculated from concentration data collected under procedures specified in an FDEP approved Comprehensive Quality Assurance Plan (CQAP) and analyzed by an FDPH certified laboratory, in addition to logged flow data accumulated during drainage discharges. The composite sample total phosphorus concentration (mg/L) will be multiplied by the flow volume (MG) from discharge events (daily time-step) which occurred during the composite sample collection period to develop a daily load figure. Mass loadings (kg) to the receiving body will be calculated by incorporating the proper unit conversion factor to obtain total phosphorus in daily increments.

RAINFALL MONITORING

Each Basin ID that discharges through a structure within the permit area must have rainfall measurement equipment installed at a representative location and placed so that its distance from any obstruction is equal to at least twice the height of the obstruction. The rain gauge shall record rainfall, at a minimum, in one-tenth of inch (0.1") increments, totaled on a daily basis, and reported as part of each water quality data submittal.

OTHER POTENTIAL SOURCES OF PHOSPHORUS UNIQUE TO THIS PERMIT

Not applicable.

PERMIT HISTORY

Previous Application 120323-21:

Permit Renewal approved June 29, 2012: Modifications concurrent with this application for renewal included the following:

1) Basin ID 50-010-02 (Units 1 and 2 and Zone 8 Farm L, 5,206.45 acres, structures HC15.5TS, HC19.6TS, and NR26.4TE) and Basin ID 50-061-20 (Farm G, 156.14 acres, structure HC15.5TS-E) were merged into a single hydrologic basin. The new basin (Basin ID 50-010-02) name is Units 1 and 2, Zone 8 Farm L, and Farm G. The BMP Plan for this basin consists of Water Management (0.5 inch), Particulate Matter and Sediment Controls (6), Nutrient Application Control, Nutrient Spill Prevention, Soil Testing, and NPDES Permit with Phosphorus Controls.

2) The pump start, stop and harvest/plant elevations for the 0.5 and 1.0 inch Water Management BMPs were revised. The new criteria continues to provide the storage volume necessary to detain 0.5 inch or 1.0 inch of rainfall, as applicable.

3) Ownership and operator information, tax identification numbers, maximum calibrated capacities, and farm acreage were updated, where applicable.

Previous Application 070613-8:

Permit Renewal approved December 13, 2007: This renewal included: (1) an update of maximum calibrated capacities for the SFCD based on submittal of revised calibration equations, (2) revised property tax identification numbers and ownership resulting from the buying and selling of land, and (3) a change in detention for Unit 1 and 2 & Zone 8 Farm L (Basin ID 50-010-02) from 1 inch to 0.5 inch. The approved pumping criteria for achieving the original 1.0 inch level of detention based on rainfall amounts and water table elevation was maintained. However, it was apparent that lower retention based on rain gage readings at the site was being provided. This was explained by the need of providing flood control for the City of Belle Glade, located within the SFCD boundaries. The reduced detention level was compensated by Best Management Practices in other categories (sediment control, nutrient management, or urban practices). The revised BMP Plan included 25 points of BMPs for the SFCD, the urban, and the agricultural participants.

The SFCD was responsible for contacting all property owners and permit participants within its boundaries, as necessary, to inform them of the terms and conditions of this permit.

Where the term "landowner" was used throughout this report, it was meant as a collective term to include any permit participant responsible for permit compliance.

The historical summary of water year phosphorus data for the five water control district Basin IDs 50-010-02, 50-010-03, 50-010-04, 50-010-06, and 50-061-20 was included for reference in Exhibit 11. Note that for the EAA basin the primary compliance was measured basin wide and the secondary compliance was measured at farm level only. Secondary compliance based on farm level data was used for reference only unless the EAA basin was determined by the District to be out of compliance at some future time.

Previous Application 051220-3:

Permit Modification approved March 20, 2006: The purpose of the administration update was to remove structure MC26.1TW, serving the former Unit 5 (Basin ID 50-010-05), from the permit due to structure MC25.7TW coming online. The effective date for termination of MC26.1TW was September 7, 2005. Previous Application No. 040209-1-E provided for the existing Lake Harbor structure MC26.1TW to be abandoned approximately 80 days after MC25.7TW came online. The effective date for structure MC25.7TW was July 29, 2005.

Previous Application 040209-1:

Permit Modification approved January 12, 2005: Basin IDs 50-010-05 and 50-010-06: The Florida Everglades Forever Act requires the South Florida Conservancy District (SFCD) to participate in the Everglades Construction Project and divert discharges away from Lake Okeechobee, south to the Everglades Agricultural Area (EAA) under the 298 Diversion Project. It is

the goal of the Diversion Project that modifications to the discharge occur as funds are available from the Everglades Fund and within 60 days of construction of the appropriate Stormwater Treatment Area. In the case of structure MC25.7TW, ultimate discharge is to STA 3 and 4 (STA 3/4) via the Miami Canal prior to discharge to Water Conservation Area (WCA) 3A. This diversion was completed concurrently with STA 3/4 coming online.

The first three Everglades Works of District (EWOD) permit applications for diversions were submitted in September 1998, for Closter Farms and in April 2000, for East Beach Water Control District and for East Shore Water Control District. Permit applications for the diversion projects to be served by STA 3/4, the South Shore Drainage District (SSDD) and the South Florida Conservancy District (SFCD) were submitted in February 2004. Concurrently with the modifications to the EWOD permits, applications for new surface water operating permits were submitted to regulate the operation of the structures under the diversion configuration and reporting requirements.

For the SFCD the Surface Water operating permit describes the operating conditions for SFCD discharge through structure S-236 with the following goals: (1) divert a minimum of 80% of the volume and phosphorous load on a long-term average basis, historically discharged directly to Lake Okeechobee from the SFCD 40E-61 area, (2) allow no increase in total discharges, and (3) identify new structure MC25.7TW as the primary discharge structure, and existing structures S-236 (to Lake Okeechobee) and P-5-W (to industrial Canal) as secondary structures for the expanded Unit 5 (Basin ID 50-010-06). The existing Lake Harbor structure MC26.1TW serving former Unit 5 (Basin ID 50-010-05) will be abandoned approximately 80 days after MC25.7TW comes online. The permittee needs to report to the SFWMD the effective date of termination for its removal from this permit and be released from discharge monitoring requirements.

The acreage added to this permit, specifically to the expanded Unit 5 (Basin ID 50-010-06), as the "New Acreage", historically under Chapter 40E-61, is not within the EAA boundary; however, with this merging of the new acreage (S-236) with the existing EAA acreage, a new 10,102.75 acre basin (expanded Unit 5) was created. The expanded Unit 5 consisted of 7991.44 acres of new areas not previously permitted under a EWOD and 2111.31 acres from the former Unit 5 (Basin ID 50-010-05). Since the new Basin ID 50-010-06 also included acreage from outside of the EAA basin boundary, Structure MC25.7TW became an "inflow" point to the EAA basin. A portion of phosphorous load from Basin ID 50-010-06 will be considered inflow from outside of the EAA basin boundary (based on the new acreage, 7991.44 acres) and the remaining portion will be considered loads generated from acreage within the EAA boundary.

The discharge from the new and old acreages of the Unit 5 will not be monitored independently, therefore, the existing Basin ID 50-010-05 (formerly Unit 5) became inactive for individual load calculation and individual tax credit determination effective when the new merging Basin ID 50-010-06 became active. In addition, since the former Unit 5 (Basin ID 50-010-05) and expanded areas (S-236) did not qualify for an early baseline, the expanded Unit 5 (Basin ID 50-010-06) automatically did not qualify for an early baseline. The baseline for the new basin is based on the first full year of operation with a complete set of data for the combined Basin ID 50-010-06.

Basin 50-061-20: Farm G was transferred from permit 50-00047-E to this permit. This modification was effective upon issuance of this permit.

Basin 50-010-03: This modification moved 136 acres from the Unit 3 (Basin ID 50-010-03) to the SSDD permit, 50-00081-E, and Basin ID 50-081-02. These acres were hydraulically disconnected by plugging the culvert that runs underneath the Florida East Coast Railroad connecting the lands with SFCD Unit 3. No changes to the original early baseline for this basin are being proposed because of the minimum reduction in acreage (2%). The acreage removal is effective June 23, 2004.

The SFCD area covered under this permit now consisted of five basins. The basins discharging south to the Miami Canal, North New River Canal, and Hillsboro Canal in the EAA are: 1) the Unit 1 and 2 & Zone 8 Farm L (Basin ID 50-010-02, structures HC15.5TS, HC19.6TS, and NR26.4TE); 2) the Unit 3 (Basin ID 50-010-03, structures MC24.1TE and NR25.2TW); 3) the Unit 6 (Basin ID 50-010-04, structures HC19.7TN and HC22.5TN); 4) the Unit 5 and expanded areas (S-236) (Basin ID 50-010-06, structure MC25.7TW); and 5) Farm G (Basin ID 50-061-20, structure HC15.5TS-E). All the structures serving all the basins in this permit were existing structures except for structure MC25.7TW which became effective in December 2004. These five basins are hydrologically isolated from each other.

It was the intent that this permit, under the Chapter 40E-63 program, would be consistent with the requirement outlined in Chapter 40E-61 program, the EAA-EPD Management Plan Master Permit (50-00001-E), the SWM/ERP operating permit, and DEP Consent Agreement OGC File No. 91-0707; and every effort will be made to avoid duplication of effort, particularly with Best Management Practices implementation, monitoring, and reporting requirements. If a conflict in permitting requirements between

programs arises, the more stringent requirement shall apply. Participation in the required Chapter 40E-63 BMP program does not relieve the parcel owners or participants in the permit No. 50-00001-E Management Plan Master Permit of the responsibility for compliance with other rule or statutory requirements applicable to Lake Okeechobee, the EAA, or other water bodies or basins.

Previous Application 011231-1:

Permit Renewal approved April 11, 2002: This renewal included updates to property tax identification numbers, acreages and ownership resulting from the buying and selling of land.

Previous Application 991012-1:

Permit Modification approved December 9, 1999: Basin ID 50-010-02 (Structures HC15.5TS, HC19.6TS and NR26.4TE) originally included 5,100.99 acres, which was expanded by merger with the 266 acres of existing Basin ID 50-061-02 (west portion of Section 1, Township 44S, Range 37E). This resulted in a larger Basin ID 50-010-02 of 5,366.99 total acres, with Basin ID 50-061-02 becoming obsolete. The effective date of this change was May 17, 1999.

Basin ID 50-061-02 (structure HC15.5TS01), was historically monitored for water quantity only. As part of this modification, this structure became a non-monitored structure discharging internally to the newly merged basin. Monitoring for Basin ID 50-061-02 is downstream at HC15.5TS. All reporting for this structure is by the SFCD. The effective date of this change was May 17, 1999.

Under the agreement, the SFWMD became the owner of 50,857 acres of lands in fee and 490.0 acres of leased lands in the southern portion of the EAA. Some of these lands were previously owned or controlled by Talisman and some were previously owned or controlled by other parties to the agreement. The non-Talisman farming entities that previously owned land in the District-acquired area exchanged their interest in those lands for interests in the northern Talisman parcels that were not acquired by the District. They also retained a farming reservation on the District's newly acquired southern lands that Talisman previously owned. The farming reservations ran until March 2005, except for those lands requiring initiation of construction of STA 3/4 by 2002.

The Exchange Agreement also included a separate Agreement governing the Transfer of Permits/Notification of Transfer of Interest in Real Property. The Permit Agreement provided for the transfer/modification, where applicable, of the existing Talisman permits (surface water management, water use, right of way, Everglades Works of the District, etc.) from Talisman to the new owners or lessees of the various parcels as co-permittees upon submittal of the required information. This information included, at minimum, a Joint Use, Maintenance and Right of Entry Agreement signed by all the new and existing (where applicable) co-permittees.

These changes were a result of the following:

On March 25, 1999, an Exchange and Purchase and Sale Agreement, governing the sale and exchange of over 60,000 acres of land in the Everglades Agricultural Area (EAA), was executed by the SFWMD, Talisman Sugar Corporation, St. Joe Paper Company, United States Sugar Company, Okeelanta Corporation, South Florida Industries, Inc., Florida Crystals Corporation, Sugar Cane Growers Cooperative of Florida, United States Department of the Interior, and the Nature Conservancy. Most of the lands (approximately 54,500 acres) were either owned or leased by the Talisman Sugar Corporation.

Pursuant to the Exchange Agreement, Basin ID 50-061-02 was acquired by Triple S Holdings (Knight Holdings).

Basin ID 50-010-02 is an early baseline basin while former Basin ID 50-061-02 is not. The merger of Basin ID 50-061-02 into Basin ID 50-010-02 did not affect the early baseline status of the SFCD Basin ID 50-010-02. However, should Basin ID 50-061-02 separate from the SFCD permit, it will revert back to a non-early baseline basin.

The merger of existing Basin IDs 50-010-02 and 50-061-02 formed one new larger Basin ID 50-010-02. The Adjusted Unit Area Load (AUAL) baseline value for existing Basin ID 50-010-02 (established WY94) is 1.86 pounds/acre for 5,100.99 acres. The AUAL baseline value for existing Basin ID 50-061-02 (established WY95) is 0.34 pounds/acre for 266.00 acres. The average-weighted AUAL baseline value for the new Basin ID 50-010-02 is 1.78 pounds/acre (5,366.99 acres). Permit No. 50-00061-E was modified concurrently to remove Basin ID 50-061-02.

Previous Application 961115-3:

Permit Renewal approved March 12, 1998: Basin ID 50-010-01 (structure HC17.9TS), including 784.17 total acres was moved from this permit to permit 50-00074-E with the University of Florida Institute for Food and Agricultural Services Everglades Research and Education Center (IFAS-EREC) as the permittee. Pump structure HC17.9TS is located within Unit 2 of the SFCD boundaries. The property was managed by IFAS-EREC and was used primarily for crop and BMP research, development and monitoring. The effective date of this change was June 1, 1997.

Also occurring in previous Application No. 961115-3-E: Basin ID 50-010-05 (structure MC26.1TW also known as P-5-E), including 2,090.67 total acres, was determined to discharge to the EAA. It was added to this permit as a new basin. The effective date of this change was January 1, 1997.

Previous Application 920930-4:

This was the original permit issued to South Florida Conservancy on July 15, 1993.

PERMIT CONDITIONS

Administrative Conditions:

1. The permit application and Staff Report are incorporated by reference and made part of this permit.
2. This permit authorizes the use of the Works of the District named in the Staff Report for the period specified on the permit, provided the Best Management Practices and the Discharge Monitoring Plans are continuously implemented and maintained. Continued use of the Works of the District beyond the expiration date will require renewal of this permit by the permittee, or an equivalent entity acceptable to the District, or issuance of the applicable permit to the individual landowners within the area included in this Works of the District permit. The permittee shall submit an application for permit renewal at least 90 days prior to the expiration date.
3. If the District is unable to fulfill its responsibilities to improve and protect the water quality of the Everglades Protection Area, or to reduce the phosphorus loadings from the basins within the Everglades Agricultural Area by 25% from the implementation of best management practices, the District may institute appropriate proceedings, pursuant to subsection 40E-63.101(5), F.A.C., to ensure that the goals are met.
4. If a modification to the approved BMP Plan or Discharge Monitoring Plan is filed in the future and the proposed activity is under the scope of other District Rules requiring authorization, the permittee shall also submit applications for the applicable new permits or modifications (e.g. Environmental Resource Permitting, Surface Water Management, Consumptive Use, Well Construction, Right-of-Way, or Lake Okeechobee Works of the District).

Limiting Conditions:

1. The permittee shall successfully implement all elements and requirements of the approved Best Management Practices Plan according to schedule, including monitoring of implementation, operation and rationale (see Best Management Practice Conditions).
2. The permittee shall implement all elements and requirements of the approved monitoring program adequately and according to the approved schedule to ensure that flow, total phosphorus concentration, and phosphorus load are documented (see Discharge Monitoring Conditions).
3. The permittee shall allow District staff, or designated agents, reasonable access to the permitted property, at any time, for the purpose of evaluating the water quality monitoring system on-site, collecting water quality samples, or monitoring best management practice implementation. District staff shall attempt to notify, by telephone, a person designated by the permittee prior to a site visit. Since it is not possible to predict precisely when discharges will occur or problems will arise resulting in the need for a site visit, the District may not be able to provide a lengthy period of notice to the designated person in advance of a visit. However, at a minimum, the District will provide notice at least one hour prior to a site visit for the purpose of water quality monitoring and at least 24 hours prior to a site visit for best management practice installation or operation inspections.
4. The permittee shall notify the District, in writing, within 30 days after any significant change in land practice, as described in subsection 40E-63.102(7), F.A.C., is made on the permitted parcel.
5. This permit does not relieve the permittee of the responsibility to comply with all other laws or regulations applicable to the use of or discharges from the parcel.
6. This permit does not convey to the permittee any property right nor any rights or privileges other than those specified in the permit.

7. This permit does not relieve the permittee from liability for harm or injury to: human health or welfare; animal, plant or aquatic life; or property.
8. The surface water management and monitoring systems must be effectively operated and maintained in accordance with the Environmental Resource/Surface Water Management Permit. Any changes in drainage, land use, or operations that could affect the BMP Plan or water quality of the discharge must be reported in writing to the District.
9. The permitted discharge shall not otherwise be harmful, or adversely affect proper use and operation of the Works of the District.
10. The permittee shall achieve the phosphorus load allocations specified in Appendices A3 (EAA Basin Compliance) and A4 (EAA Farm-Scale Allocation), in accordance with the procedures described in Rule 40E-63.145, F.A.C., (Compliance and Enforcement of Individual Permits).
11. Legal entities, or groups of cooperating landowners, operators, and lessees responsible for implementing this permit, shall remain capable of performing their responsibilities required by permits issued pursuant of Chapter 40E-63, F.A.C.
12. In the event that the District determines that any permittee within a permit is not complying with the specific terms and conditions of the permit, the District will institute enforcement proceedings against this permittee, and if necessary, require the non-complying permittee to apply for a separate individual permit.

Best Management Practice Conditions:

1. The approved Best Management Practices Plan required in the Staff Report is incorporated by reference and made part of this permit.
2. The permittee shall continue to implement the Best Management Practices Plan in accordance with the permit and shall submit any proposed revisions to the Best Management Practices Plan for review to the District. District staff will review the proposed modifications and take final action.
3. The permittee shall submit to the District an annual report summarizing implementation of the approved Best Management Practices Plan. The report must contain a summary of all required activities including documentation of best management practice installation, operation, and maintenance activities. The report is due February 1 of each year after permit issuance and shall cover the previous calendar year.

Discharge (Water Quality And Quantity) Monitoring Conditions:

1. The approved Discharge Monitoring Plan (water quality and quantity) presented in the Staff Report is incorporated by reference and made part of this permit.
2. The permittee shall implement the Discharge Monitoring Plan in accordance with the permit and shall submit to the District any proposed modification to the monitoring plan. District staff will review the proposed modification and determine the appropriate action.
3. The location of the water quality monitoring sample intake shall be permanently fixed upstream of the discharge location, as specified in the permit application and Staff Report, and be placed such that water sampled is representative of all water that passes through the discharge structure.
4. All field water quality sample collection, preservation, handling, transport, and chain-of-custody documentation must be conducted in accordance with the FDEP-approved Comprehensive Quality Assurance Plan, as specified in the approved Discharge Monitoring Plan. All phosphorus analyses shall be conducted by the FDPH-certified (nutrient analysis) laboratory specified in the approved Water Quality Monitoring Plan.

5. In the event that water quality automatic sampling equipment becomes inoperable for any reason, grab samples shall be taken temporarily on a daily basis during discharge and samples will be composited for no more than 14 days for total phosphorus analysis. Reasonable efforts must be made to render the automatic sampling equipment operable as quickly as possible.
6. Monitoring conditions may be reduced or adjusted upon submission of data and/or studies acceptable to the District which demonstrate that reasonably equivalent data will be obtained from the reduction or adjustment in monitoring.
7. The District will provide at least a one-week notice to the applicant of its intent to conduct a Quality Assurance (QA) field audit of sample-collection procedures. The District will also provide the results of the QA field audit to the permittee.
8. As required by paragraph 40E-63.136(2)(e), F.A.C., the monthly discharge monitoring reports, including water quality, quantity, and rainfall data must be submitted through the District's web-based submittal system no later than 60 days from the last day of the sampling period being reported. The District's web-based Everglades Works of the District (EWOD) data submittal system is available to all permittees at www.sfwmd.gov/ewodweb/.
9. The District will compile and distribute an annual water quality and quantity report for review by the permittee. The permittee shall notify the District of any discrepancies within 30 days of receipt of the report.
10. Each Basin ID that discharges through a structure within the permit area must have rainfall measurement equipment installed at a representative location and placed so that its distance from any obstruction is equal to at least twice the height of the obstruction. The rain gauge shall record rainfall, at a minimum, in one-tenth of an inch (0.1") increments, totaled on a daily basis, and reported as part of each water quality data submittal.
11. Chapter 40E-63, F.A.C. requires all Discharge Monitoring Plans to provide reasonable assurance that annual water discharge and total phosphorus load are accurately documented (subsection 40E-63.136(2) and paragraph 40E-63.156(1)(a), F.A.C.). Subparagraph 40E-63.136(2)(c)9, F.A.C., requires the pump calibration methodology and results of the calibration methodology to be certified by a Florida-registered Professional Engineer. Each calibration report shall contain, at a minimum, methodology, instrumentation, procedures, data collected, operational information needed to determine flow, and final calculations applied to determine flow. Each calibration shall cover the full operating ranges of pump speed and head differentials. The calibration shall also contain a site-specific temporary backup methodology to be utilized if the primary flow measurement equipment becomes inoperable for any reason. The permittee shall submit a revised certified pump calibration or verification if an individual pump has operated in excess of the time recommended by District "Flow Calibration Guidelines, Developed in Support of Chapter 40E-63, F.A.C., Everglades BMP Permit Program, Amended July 24, 1997," or if any pump or structure modifications, changes or improvements are made which affect discharge measurement.
12. The property, which is the subject of this permit, is located in an area which is subject to Section 373.4592, F.S. (Everglades Forever Act). This special condition is to advise the permittee that this property will be subject to additional permitting requirements for implementation of a Best Management Practice research program in the event that the EAA Environmental Protection District is found not in compliance with subparagraph 373.4592(4)(f)(2), F.S.

WCD LANDOWNER/LESSEE BMP IMPLEMENTATION REPORT FOR YEAR ENDING _____

Landowner: _____ Lessee: _____

Describe the ditches, canals, culverts and pumps on your property:	Circle all existing land uses:	sod	rice	
	sugarcane	vegetables	citrus	pasture
	tree nursery	fallow	mixed crops	urban
	rock mining	residential	wetlands	ag. commercial
	government	undeveloped	detention area	ag. industrial

SELECTED PRACTICE	BMP PRACTICES	BMP IMPLEMENTATION REQUIREMENTS	COMMENTS
REQUIRED	On-Farm Water Detention	To the greatest extent practicable, on-farm water table management has been implemented to detain the first inch of rainfall on an average basis. Farm records show specific details, such as an upper and a lower water table elevation for the farm to use as reference points to control pumping.	
REQUIRED	Sediment Controls	Each of the sediment controls selected on Page 2 are consistently implemented over the entire acreage. A minimum of two sediment controls has been selected.	
REQUIRED	Fertilizer Spill Prevention	Formal practices and protocols are in place for handling and placement of fertilizer, storage and disposal of fertilizer containers, and fertilizer transfer on the farm. Spills are documented and cleaned up immediately.	
REQUIRED	Fertilizer Application Control	Records identify areas and crops where controlled application of fertilizer was practiced. (e.g. Banding, Pneumatic)	
REQUIRED	Soil Testing	Soil tests are taken as a guide for fertilizer application. Records are kept showing crops grown, areas tested and test results. If quantity applied varies from test recommendation, records will explain why.	
	Alternate BMP	Description:	
IF LAND IS USED FOR PASTURE, THE FOLLOWING IS REQUIRED:			
	Pasture Management	Cattle access to perimeter drainage ditches is limited, mineral supplements are supplied away from drainage ditches, and cattle are supplied drinking and cooling water by isolated ponds.	

I certify that the above selected BMPs have been implemented in accordance with the above requirements and that the appropriate staff has been instructed on the BMPs and the conditions of the permit. Farm records showing specific details of the implementation of each BMP will be provided prior to or during any on-site inspection.

WCD LANDOWNER/LESSEE BMP IMPLEMENTATION REPORT FOR YEAR ENDING _____

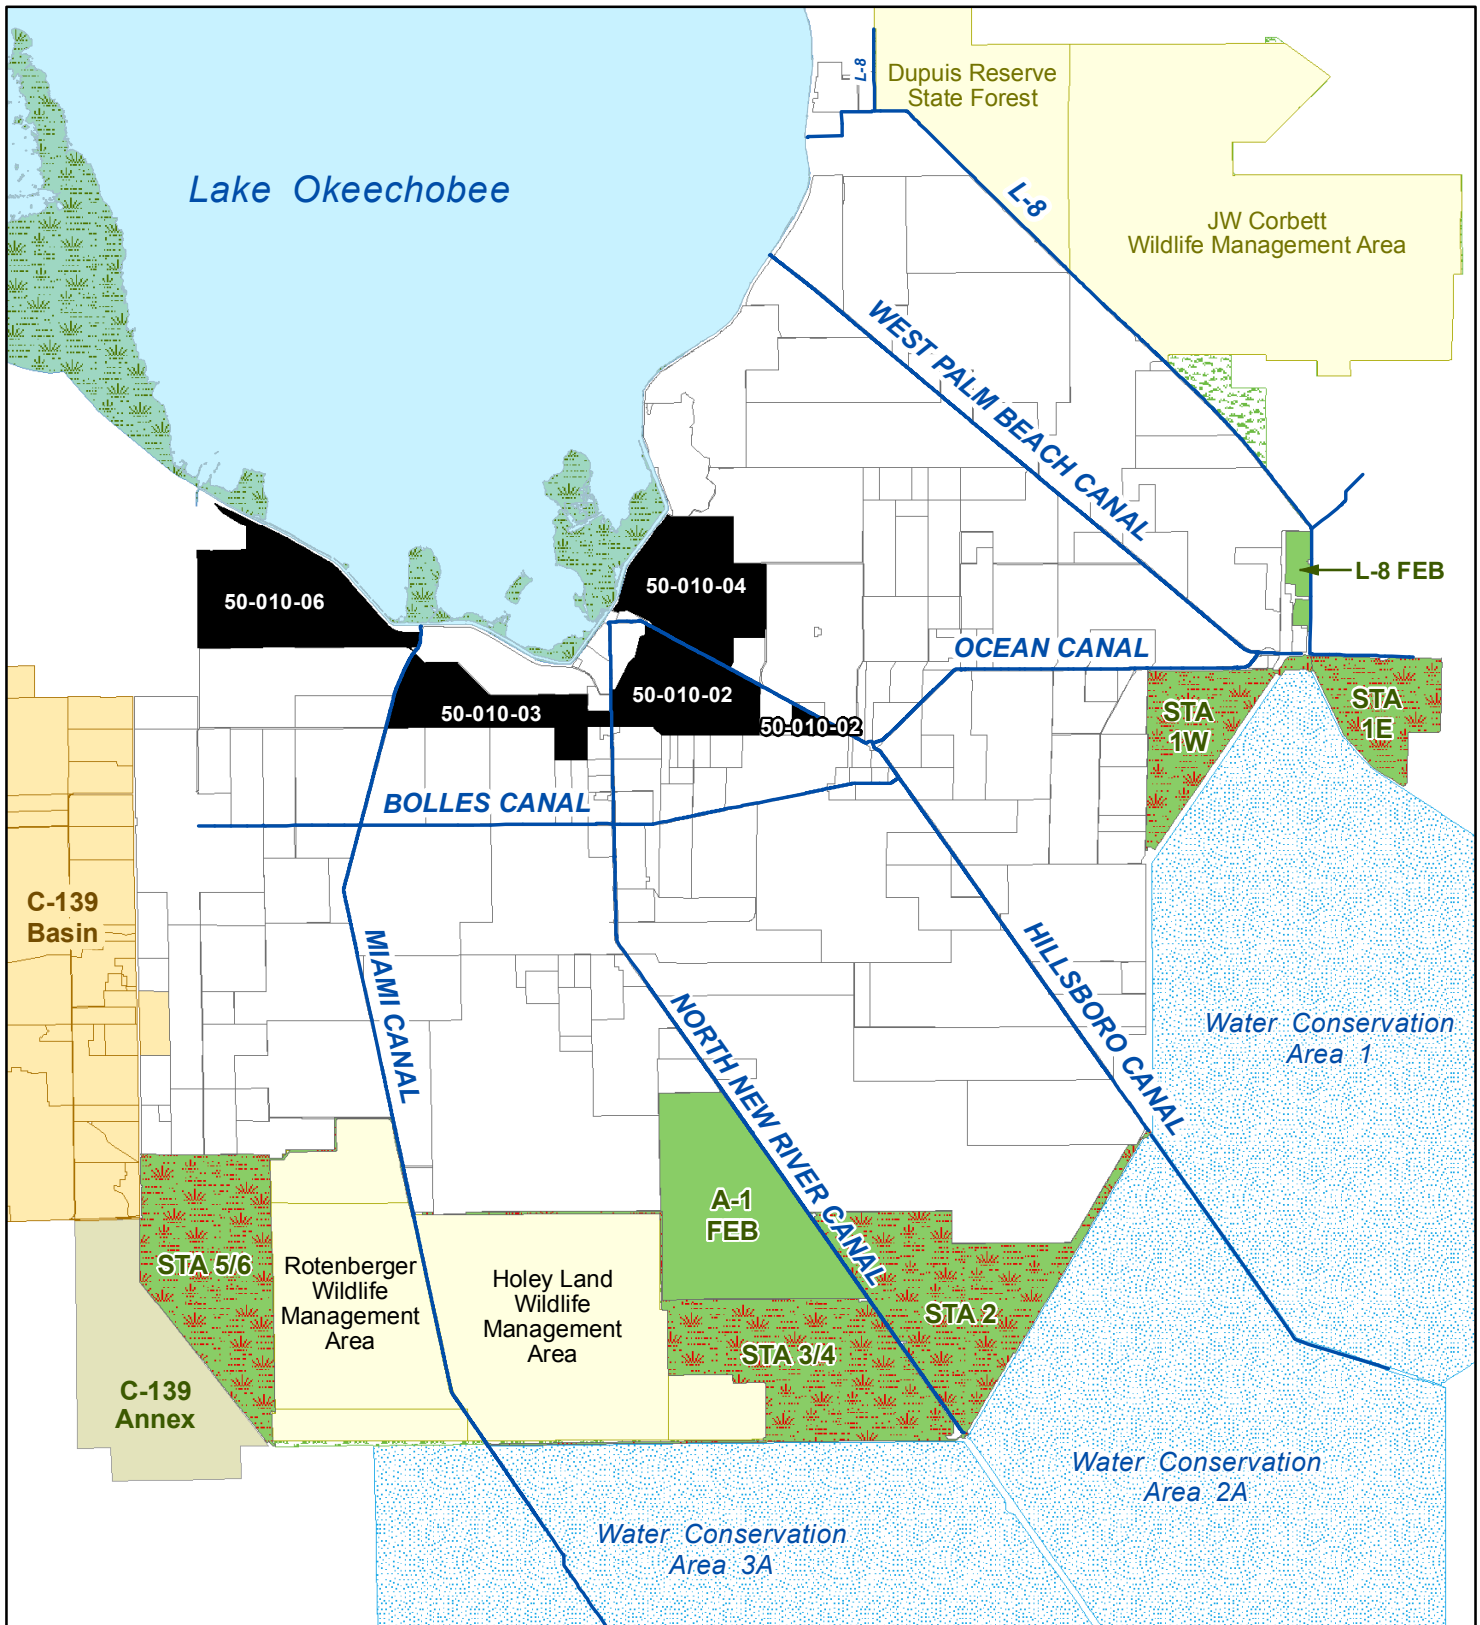

Landowner: _____ Lessee: _____

PARTICULATE MATTER & SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPs)

Selected Practice	A Minimum of Two are Required	Sediment Control Description	BMP Implementation Maintenance Comments
	Level Fields	Reduce soil erosion through a systematic maintenance program of leveling fields promoting uniform drainage.	
	Slow Velocity in Main Canal	Minimize sediment transport by slowing the velocity in the main canal near the farm discharge structure (i.e. construct and maintain a sediment trap; widened canal section).	
	Grassed Swales and Field Ditch Connections to Lateral Canals	Reduce soil erosion using turf grass as a soil stabilizer in swales and at the point of field ditch connections to lateral canals.	
	Ditch Bank Berms	Minimize sediment transport by constructing berms on top of ditch banks and promoting vegetative cover.	
	Canal Cleaning Program	Minimize sediment build-up through a systematic canal cleaning program and management plan to regularly remove sediments from ditches and canals.	
	Aquatic Weed Control	Minimize phosphorus released from aquatic plants by controlling them at the main discharge locations.	
	Field Ditch Drainage Sumps	Reduce sediment transport by creating and maintaining sumps to trap sediments at field ditch connections to lateral canals.	
	Discharge Barriers	Reduce phosphorus-laden debris from leaving the site by using barriers at discharge locations.	
	Constructed Ditch-Bank Stabilization	Reduce soil erosion through the construction and maintenance of ditch-bank stabilization (i.e. revetment; rip rap).	
	Slow Field Ditch Drainage	Minimize sediment transport with slow field ditch drainage near the discharge structure by placing and maintaining culverts with risers and boards on laterals and/or field ditch connections near farm discharge pumps.	
	Sediment Sump in Main Canal	Reduce sediment transport by constructing and maintaining a sediment sump on the upstream side of farm discharge structures.	
	Forage Growth	Reduce soil erosion by maintaining a sustainable forage growth on pasture.	
	Soil Stabilization Infrastructure	Reduce sediment transport by stabilizing the soil at canal/ditch intersections through infrastructure improvements (i.e. flexible plastic pipe; polymer treatment).	
	Cover Crops	Reduce soil erosion with cover crops and/or fallow flooded fields.	
	Culverts Above Ditch Bottoms	Minimize sediment transport by placing and maintaining culvert bottoms above all ditch bottoms on the farm side of their connection to the lateral or main canals.	
	Canal Bank Vegetation	Reduce sediment transport by planting vegetation or maintaining existing vegetation along all ditch and canal banks.	
	Other Sediment Control BMP	Proposed by permittee and accepted by SFWMD.
