

The Squeeze on Car Washing

Washing our cars in our driveways is one of the most environmentally un-friendly chores we can do.

What runs off from your car goes right into stormdrains and into Lake Toho where it may poison aquatic life and wreaks other ecosystem havoc.

After all, that water is loaded with a witch's brew of gasoline, oil and residues from exhaust fumes as well as the harsh detergents being used for the washing itself.

Commercial Car Washes are good for the environment because they treat waste water & conserve water

If you must wash your car at home, avoid the driveway and wash on the lawn or gravel surface. Choose a biodegradable “green” soap specifically formulated for automotive parts.

Phosphate Free is the Key!

10% Total Recycled Fiber

Join City of Kissimmee in the effort to protect Lake Toho
