

Moving Forward: Proposed Tampa Bay Projects Database

- One projects database for Reasonable Assurance, BMAPs, other regulatory reporting requirements within the Tampa Bay watershed
- Project records can be used for multiple reporting requirements; one-time entry
- Projects in RA plan and BMAPs will be migrated into Tampa Bay Projects Database
- Updated database developed through FDEP BMAP project, maintained by TBEP

Projects in RA Database

- More than 250 projects migrated into updated Tampa Bay Projects Database
- Will need more detailed location information (lat, long; parcel number; jurisdictional limits)
- Additional parameters addressed by the project (bacteriological, nutrients, BOD)
- Can be used to meet both RA and BMAP projects reporting

New and updated projects

- Submit new projects addressing BMAPs through electronic or web-based entry form
- Initially, focus on entering and updating RA and BMAP projects in Alafia and Manatee River basins (coordinated by FDEP and AMEC)
- In 2012, update RA projects with location information in the rest of the Tampa Bay watershed (coordinated by TBEP)
