Subject: Water quality and cyanobacteria

Dear Kaitlyn,

I have been a Florida resident my entire life. I remember when 20 years ago we could eat delicious fish right out of the river. The water quality gets poorer and poorer every year, there is not seagrass to feed the creatures nestled within it and the amount of sludge increases every year. Our economy is based on the beauty here and the diverse wildlife found on our shores and in our rivers and springs. I implore you to do the right thing and vote to protect these waters, everyone is counting on those in leadership to make the right decision and succeed where others have failed at protecting our florida way of life. Please please please make a stand.
