Subject: Toxic Algae

Hi. I've been a SW Florida resident for 42+ years. I live, work and play around our states waters ever day. I have learned a lot of scientific facts in the past few years. Please start focusing on major contributors to our man-made nutrient overload pollution problem. Prevent these nutrients from getting into our waters in the first place. Focus on the source, and not the symptom. Hold these corporations and entities accountable. Demand that they release cleaned water back into our waterways after they've polluted it. Monitor them constantly. Shut them down until they comply. Just like a restaurant inspector. Investigate Mosaic Fertilizer Phosphate Mining Company, Agriculture from animals and plant production, public sewage system spills and dumps, FWC spraying poison on our freshwater lakes killing natural filtration and leaving the dead vegetation to supply algae with an abundance of nutrients, Fertilizer bans including not being able to sell it for at least 6 months. Thank you. Sincerely, Anthony McChesney
