Subject: Comment on Water Quality

Have you publicly informed our North Palm Beach community that that levels of microcystin in our drinking water are 60 times higher than what is considered safe for humans? I found out about it from my Congressman Brian Mast.

Are we to become like Flint, Michigan and the lead issue in their drinking water? I don't know if I should be drinking, bathing, or cleaning with my public water. Do you plan a campaign of information telling the public what they need to do?
