Subject: Triennial Review of Florida's Water Quality Standards

Dear Ms. Sutton:

Please work to adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

As we all know, improper water management in the Everglades has led to devastating effects on humans, fish and wildlife. These proposed water quality criteria will help to better manage those effects.

Bob Young
