The U.S. Environmental Protection Agency stated that anything about 8 parts per billion of microcystin (which results from toxic algal blooms) is unsafe for human contact. In 2018, measured levels in our community reached as high as 495 parts per billion - more than 60 times what is safe for human contact!

We respectfully urge you to tighten the standards for the amount of toxic algae allowed in our waterways to protect our health, quality of life and welfare.

Regards,

Chris Clifton
