Subject: Triennial Review of Florida's Water Quality Standards

Dear Board,

Everybody is ignoring the fact that numerous studies over the past 20 years have proven scientifically that fertilizers, primarily from sugar plantations in the Everglades, are responsible for the out of control growth of the algae. They were ordered to pay for clean up and never did because they pay off everybody. They also have a powerful lobby in D C. The people voted them out of the Everglades over 15 years ago yet the officials keep renewing their land leases. This is public land. We want it back. And we want the sugar companies to pay for the environmental disaster they have caused to south Florida.

Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

Thank you

Sincerely,

Clarette
