Subject: Water Quality

I came to Martin County in 1996 to live in a condo, fish, eat fish and enjoy the many things that are Floridian.

Three years ago I stopped fishing because of the degradation of the water quality due to the toxic algae in the waters. Fish live in those waters and the toxicity gets into their bodies and until they pass into the next world that toxicity stays with them as they grow old. I have no reason to allow that into my system and have stopped enjoying the local fresh-caught fish and because I feel that there is no reason to harm an animal, fish or whatever, I stopped fishing. Please do whatever you can to bring our waters back to their former pristine condition.

Thank you for your attention to this local? problem.
