Subject: Triennial Review of Florida's Water Quality Standards

Dear Official, Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters. We need you to please set stricter standards for Class B biosolids, which not only increase the chances of microcystin, it also adds microplastics, PFAS, and chemicals like pharma and human hormones.
