My name is Gene H. Klusmeier (561-798-3892). I am the only one to file a Qui-Tam, or a False Claim lawsuit, on one contractor, who built part of STA-1E, for not following the Army Corps of Engineers, specifications. The contractor used Sand to build the Levees, at STA-1E, not the compactable materials, that the specifications call for in the construction, of the Levees. I have visited every site in the Everglade's Renourishment Program, and found all the Levees were built the same, (Sand Construction of the Levees). The tax payers paid \$9,000,000,000 to start with, but now it is up to \$19,000,000,000, just for repairs to the, gates, flow ways, and pump stations. Palm Beach Aggregate, was paid \$220,000,000, to store and to supply West Palm Beach with drinking water. In 1954 South Florida Water Management District, fined the owners at that time, for polluting the C-51 Canal with Salt Water from their pits. There goes the Drinking Water, and for the storage part. How can you store water in a LEAKY pit. I have the results, of deep borings of the site, and the results shows sand and road construction materials, (shell Rock), both do not hold water, so it leaks. Please open up this link, I think you will like it. You cannot get rid of the Algae, if you do not have a place to clean it. Thank You
