Subject: Triennial Review of Florida's Water Quality Standards

As a person that lives on a small tributary to the St. Lucie river and has tested positive for microcystin in a nose swab I am very concerned about the effects of algae blooms in our waters. Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect the public and restore Florida's imperiled waters.

Sincerely, Glenn Kellis
Stuart FL, 34994
