Subject: Triennial Review of Florida's Water Quality Standards

Dear Official, Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

It is very important that we keep the water standards for our Florida water up-to-date as we learn more about how the water affects our health. Water is a critical part of our life. Please make the standards for water quality one that we can depend on our drinking water and also for the seafood that we also eat. Thank you.
