Subject: Triennial Review of Florida's Water Quality Standards

Dear Ms. Sutton,

I am writing to you as a concerned resident of Tequesta, Florida.

As soon as possible, please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

It is overwhelmingly negligent that the state of Florida does not have this water quality criteria in place when most states do and implement their water policies to keep their citizens safe.

Thank you for your time.

Heather Raincsuk
