Subject: Water quality in our state

EPA:

Please honor your mission to protect our water by addressing the following:

- limiting microcystin levels in all waterways to safe levels
- monitoring Mosaic and other phosphate companies to protect the public from unsafe discharges (both intentional and unintentional) from "stacks" of polluted and radioactive waste water as well as waste discharged to waterways in the normal course of mining and phosphate production
- protecting our drinking water sources from pollution

Thank you for your efforts to protect the public.
