Subject: Florida Reviews Water Quality Limits Every 3 Years. The Public Has Until Friday To Chime In

Hello Kaitlyn:

We can't keep kicking the can down the road. The costs and risks of further delay are staggering. Development plans in the EAA threaten to change the region, permanently severing the link between Lake Okeechobee and Florida Bay.

The science is settled. The money is available thanks to 75% of Florida voters who, in 2014, voted for Amendment 1. Identify and secure the land. It's now or never.

I support the 200-plus Everglades scientists who believe that increased storage, treatment and conveyance of water south of Lake Okeechobee is essential to stop the damaging discharges to the coastal estuaries; to restore the flow of clean, fresh water to Everglades National Park, Florida Bay and the Florida Keys; to improve the health of Lake Okeechobee; and to protect the drinking water for 8 million Floridians.

Using Amendment 1 and other funds, we must identify and secure land south of the lake without delay, before development in the Everglades Agricultural Area (EAA) or other uncertainties condemn our waters to irrevocable destruction.
