Subject: Triennial Review of Florida's Water Quality Standards

Dear Official, I've lived in FL since 1968, I've seen our water access and quality degrade in ways that make my heart ache. What you're voting on is crucial to make sure our water doesn't become too dangerous, too poisonous to even approach. Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

Thank you for your consideration.
