Subject: Limits for toxic algae

Ms. Sutton,

I fully support the state establishing limits for toxic algae in water, including our drinking water. In fact, the limits should be zero tolerance. Coupled with this is the need to remove the presumption that storm water facilities meet water quality standards. These facilities should be monitored at least quarterly.

Toxic algae is a threat to humans and wildlife including dogs. Beyond this is the loss of revenue to local governments that depend on tourism and clean springs, lakes, streams and coastal waters.

To move forward on reducing toxic algae we need to address the sources of nutrients that feed these algae including sewage spills, storm water, and fertilizer applications, etc.

Respectfully,

John Outland
