Subject: DEP WATER QUALITY STANDARDS NEEDED

Dear Kaitlyn Sutton,

I would like to take this opportunity to point out that our southeast florida water quality is suffering greatly and next thing we know, without the proper water quality standards in place, more people and animals will be dying. Please don't let it get that far!

The red tide may be naturally occurring from time to time but not with how much we have had lately. The pollution from Mosaic and sugar farmers and our fertilizers MUST be regulated! Now is the time to put regulations in place. Instead of cleanup after the fact, we need prevention in the first place. Please step in and help! Our Florida travel industry is already starting to suffer, as well as our housing prices, and finally our health. What does the final cost have to be before this is regulated to protect the environment? While I personally hate more government regulations, we need further environmental regulations and tests and experiments to help our environment. Once again, I would like to ask you to please step up and help! Save our fish, birds, manatees, animals and people.

Thank you!
