Most folks think of Florida for its unspoiled beaches and unspoiled wild life . At the rate our beaches are being contaminated, this no longer applies . We need to try to get back like it was , one way is to be aware how bad it is . The try to eliminate these contamination that occur at an increasing rate, by advising the public of their occurrence thus realizing we need improvement. We can not enjoy polluted beaches just like our visitors that come down to support our economy . Regards Jorge Tamargo from Miami Florida
