Subject: Triennial Review of Florida's Water Quality Standards

Hi Kaitlyn -

Although I live in Ann Arbor, Michigan, I come to the Florida coast a couple of times each year to fish with my brother. The water issues have impacted these trips on two occasions now, and I'm very interested in doing anything I can to help the situation. To that end, please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.
