Yes, we need testing and definatley strict guidlines for such..Between the radioactive waste of phosphosgybsum leeking into the peace river, raw sewage spills by the hundreds of thousands, weekly, Red Tide and cyanobacteria invading our waters, ie: run offs, fertalizer, with high nitrogen content in the air and water, I believe this is a must....I lived in Sarasota for 5 yrs, and was sick, I mean sick for 4 yrs...The odors, the stench, the poop floating in my canal has brought me to this.....protect the people, animals, birds, fish, bees, etc...or we will all die...Its a must in my book and Florida should be so concerned, the revenue will be greatly affected from tourism, and locals that will be sick and tired of paying these crazy taxes, & will move, knowing the issues, & that have not been dealt with ..from our higher ups, that we have fairly voted in to represent us "THE PEOPLE"....please I ask this to be the no 1 priority...It became that for me...as I found it, not possible to raise a healthy family in SWFlorida...and I am ...& .there are thousands that feel what I do...we know, we lived it, and still Florida is still spraying, and dumping sewage is still happening creating the algae blooms.....and fish kills...Thank you in advance...Kim..I have enclosed pic of my backyard..so youll see for yourself that our waters need attention...Check out Sarasota nitrogen content about their reclsimed water...16% nitrogen...its beyond..sick and disgusting...
