Subject: Fix the Algae problems in our community

Global warming is a large planetary issue and the fix for that requires international cooperation and resources.

Fixing our Community Algae problem is just as serious to us who live in this community.

We can and must fix it by whatever means need to be taken. Its in your hands and control to do so. I would think as a public official you would think this way too!

Let's get it done and done now! If I can help in any way please let me know.
