Subject: Water quality in Florida

I am a Florida resident and i am appalled how bad the quality of water is, especially the total amount of toxic algae in our waterways.

People are killing this planet and marine life at an amazing rate, this must be stopped and stopped very quickly.

I worry this environment is getting or near being completely destroyed by people who just don't care about our future and our future environment, think of a future where we all have to live on another planet that will never be as good as planet earth, that is our future if we survive it at all!

Our Beautiful Oceans and Marine Life don't deserve this kind of treatment. If we kill our Oceans with Plastic we kill ourselves too.

Disgusted
