Subject: Algae Limit Input

Hello Ms. Sutton,

I am writing as a very concerned citizen! Please encourage our state to be the first in the nation to address the serious environmental and human health risks associated with toxic algae in our waterways. Though the problems that lead to algal blooms are complex and need further understanding, it is imperative that the FDEP do everything in its power to uncover these deeper issue as well as inform our population of the dangers cyanobacteria and other species pose.

You are in a unique position to speak on behalf of us that are feeling true concern for our health and the well being of our children and families.

Thank you,
Mandy Sunshine Baily
