Subject: Florida Toxic Algae Bloom Public Comment by Nick Webster. Thank you for this opportunity to speak!

Dear Kaitlyn and Congressman Mast and Hearing Participants,

Several years ago I was discussing our toxic algae bloom problems with some others whom were convinced the problems were of a pyramid accumulation of nitrates and other byproducts from fertilizers for commercial use. They went on to say they were actually involved in a federal research study of our East Florida Toxic Algae Bloom crisis. They went on to say; incredibly those fertilizer products were fortified; bulked-up, from the commercial use of sewer water restoration at the town/county level of sewer water restoration programs.

This sewer water restoration byproducts transformed into fertilizer theory should be easily approached as a turning point unto Toxic Algae Bloom born of human waist as either true or false. I; Nick Webster of 1782 S.E. Fallon Drive, Port Saint Lucie, Florida 34983 would like to have this comment entered into the record of your hearing.

Thank you !

Respectfully yours in Christ @ Sea & @ Home !

Nick Webster
