Subject: Triennial Review of Florida's Water Quality Standards

Dear Official, Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

I recently built a home in Bokeelia. I brought my parents to spend Thanksgiving, and we arrived on Saturday. Since my arrival every night I heard fish jumping outside very active sound of life in the canal. On Tuesday morning, there were dead fish everywhere it was a devastating sight..it made the heart ache. I pray that this stops. Thank you for anything you can do.
