Subject: Triennial Review of Florida's Water Quality Standards

Dear Ms. Sutton,

Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

As a property owner in Pompano Beach, Broward County, and a member of Bullsuger.org, I have great concern about the water quality in southern Florida, and the long-term implications of both good and bad water and agricultural management.

Thank you for your consideration,

Randall Smith
