**Subject:** Unsafe marine environment

Dear Mam, My wife, myself and everyone of our 295 units in Stuart believe that discharges, toxic blooms and dead marine life are all signs of an unhealthy st. Lucie river which leads to poisonous conditions for our residents that manifest's itself in chronic breathing problems and other adverse health effects. We have supported a clean up as long ago as the 1980's e.g. deooze it or lose it. We must have a clean environment so send the water into holding pits for Big Sugar's use. Please help! Seth Johnson
