Subject: CD - Limits Must Be Set on Toxic Algae

I was born and raised in St Petersburg, Florida on the beautiful Gulf of Mexico. Due to my father's profession we moved to Illinois for a number of years. I moved back to Florida 21 years ago and therefore have lived half of my life in this great state.

I am a homeowner on a canal two blocks off the Caloosahatchee River in Cape Coral. The toxic algae bloom we experienced in our waterways in 2018 must NEVER be allowed to happen again. It was **devastating** to our environment and our health, not to mention the tourism industry that our area and the entire state depends on. Please take the action necessary to **severely** limit the amount of toxins allowed to be released into our precious waterways. I would prefer zero toxins be allowed. Please do whatever it takes!

Thank you.
