**Subject:** Triennial Review of Florida's Water Quality Standards

Dear Official, Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

Hello Kaitlyn - not sure what all that means above but I would now be a Florida resident if the St Lucie & Indian River had been cleaned up!!! Was planning to move to Stuart / Palm City but the pollution coming from Lake Okeechobee was terrible. Hard to believe that a state which prides itself on Sunshine and Beaches would allow this to happen!!!!

The canal that dumps into Bessy Creek/Saint Lucie river in Palm City is an open sewer - I've seen it turn green & foamy . The other canal from the lake is also polluted !!! I've seen thousand of dead fish along the beautiful board walk that fronts Stuarts . A real shame

Please do something quickly - I would still love to move to Stuart Florida!!

Thank You

Tom Vogelsong
