Subject: Triennial Review of Florida's Water Quality Standards

Dear Official, Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

Our family has been dealing with major health issues, cancer and autoimmune, blurry vision, brain fog. Our dog died. We get sick each time when releases happen, I am tracking it. The medical community is treating sick people for flu when microcystin is really the culprit. This is highly dangerous to treat patients without all the facts. The schools are seeing increased absences during redtide and Lake O releases. Microcystin causes illness and brain fog yet our students are expected to push through while being poisoned by our state. Deplorable! I have lost trust in the state of Florida, our government and the medical community. The doctors dont take it seriously and neither do our politicians. Trust is gone for any of these agencies. I can tell you I am not alone in how I feel.

Best regards, Toni Connolly 239-910-4456
