Subject: Water Quality

The quality of the water in Florida is disgraceful. The regulations for the amount of toxic algae that is allowed needs to be tightened and then enforced!

The safety and the health of the citizens of Florida need to be primary consideration, not the benefits to developers and whoever else benefits from polluting our waters. Our natural habitat, animals and vegetation need to be protected also. We depend a whole lot on these groups for our existence and quality of life.

Please do what is needed to protect our quality of life...tighter regulations and enforcement.

Thank you,
Wendy Meehan
Seminole, FL.
