**Subject:** Triennial Review of Florida's Water Quality Standards

Dear Official, Please adopt the 2016 EPA draft recommended water quality criteria of 4 micrograms per liter for microcystin and 8 micrograms per liter for cylindrospermopsin to best protect recreational users and restore Florida's imperiled waters.

I bought a house by the water and the water smells terrible, fish kills and sick manatees are the normal. The vultures are flying around landing on our houses and causing major cleanup here in South Venice.

Why does Venice allow drainage run off right thru our public beach?

Last year a business from Tampa was caught dumping sludge into the water canal here in Venice per eyewitnesses. But somehow Claimed they were just washing their trucks off. No follow up was ever reported. Just one Example of all the pollution that is being dumped into our gulf along with leakage is from Mosaics pipes and Lake Okeechobee runoff polluting into our Gulf. Better management, stiff penalties and solutions need to be addressed or we will be losing our coastline and beautiful water. These businesses do not care about the damage they do they just want the all mighty dollar.

Sincerely,  
Sheri Durant
