Wastewater Treatment Plan

WWTF Plan Minimum Requirement No.1: The facility's permitted capacity in average annual gallons per day.

The City of Winter Garden WWTF recently renewed its Domestic Wastewater Facility Permit (Permit No. FL0020109) with an effective date of December 18, 2023 with a permit duration of five (5) years. Therefore, the newly issued permit expires on December 17, 2028.

The new permit has a continued permitted design capacity of 4.75 MGD with an allowance for constructing an expansion of the facility to 7.5 MGD. Additionally, there are three permitted reuse or disposal discharges allowed by the permit. Table 1 summarizes the three discharge allowances for the City's WWTF.

Table 1. Permitted Reuse or Disposal Discharges

Discharge Name	Effluent Limit (AADF)	Discharge Description	Comments
Surf. Water Discharge D-001	1.75 MGD	Surface Water	Lake Apopka
Land Application R-001	2.00 MGD	RIB System	Discharges to D-001
Land Application R-002	4.75 MGD	Slow-rate PAR	Allows transfer of 0.750 MGD AADF to golf course

WWTF Plan Minimum Requirement No.2: The facility's permitted TN and TP effluent limits for the facility.

Tables 2 & 3 summarize the permitted effluent limits for Total Nitrogen (TN) and Total Phosphorus (TP). Table 2 summarizes the limits for single sample, weekly average, monthly average and annual average maximum concentrations for TN and TP at the Surface Water Discharge (D-001). Table 3 summarizes the maximum monthly loading limits for TN and TP and the maximum annual loading limit for TP.

WWTF Plan Minimum Requirement No.3: The annual TN and TP loads (showing both flow and concentrations) discharged from the facility over the past five years, estimated if necessary.

Table 4 summarizes the historical annual average TN loading to surface water location D-001. The average annual TN loading over the 5 year period (2019 thru 2023) was 5,268 lb/yr.

WWTF Plan Minimum Requirement No.4: A capacity analysis for the facility, considering future growth over the next 20 years;

Attached to this memo (Attachment A) is the Capacity Analysis Report (CAR) that was submitted to the FDEP as part of the renewal application for Domestic Wastewater Facility Permit No. FL0020109. The permit was recently renewed with an Effective Date of December 18, 2023. The new permit authorizes the City's WWTF to continue discharging to waters of the State under the National Pollutant Discharge Elimination System (NPDES). The permit also allows construction to expand the facility from 4.75 MGD to 7.5 MGD.

Condition 2 under Section V.B. of the new WWTF permit requires that an updated CAR be submitted to the FDEP annually by September 1st of each year. The first CAR due under the new permit is on September 1, 2024 but will be prepared earlier to enable submission of the updated CAR as part of the Final Wastewater Treatment and OSTDS Plan that is due to FDEP by August 1, 2024. The CAR submitted with the Final Wastewater Treatment and OSTDS Plan will analyze growth out to Year 2045.

WWTF Plan Minimum Requirement No.5: A list and ranking of facility construction, expansion, or upgrades necessary to meet applicable nutrient water quality requirements (for example, to meet nutrient effluent limits in BMAPs and TMDLs, section 403.064(17), Florida Statutes, requirements, or other statutory or regulatory requirements), and the estimated costs of these facility improvements.

The City of Winter Garden WWTF is being upgraded to expand treatment capacity from 4.75 MGD to 7.5 MGD and to meet Advanced Wastewater Treatment requirements by converting from a conventional 5 stage Bardenpho process to a 5 stage MBR system facility by 2033; in accordance with House Bill 1379. The new MBR system will produce reclaimed effluent that meets the 5/5/3/1 milligram per liter concentration standards for BOD₅, TSS, Total Nitrogen and Total Phosphorus, respectively.

A cost estimate for converting the plant to an MBR system to meet AWT standards was completed in March 2023 at the 30% design phase. The range of the projected cost for the plant upgrade was between \$95M (without Contingency) to \$114M (with Contingency). The 30% cost estimate was generated by Wharton Smith (CMAR) on March 23, 2023 and the estimate is detailed in Figure 1.

The City is currently contracted with the CMAR to perform Pre-Construction Services; including cost estimates at the 30%, 60% and 100% design phases. It is anticipated that an updated cost estimate (60% design phase) will be incorporated into the Final WWTF/OSTDS Plan memo which is due to the Department by August 1, 2024.

WWTF Plan Minimum Requirement No.6: A projected timeline of the dates by which the construction of any facility improvements, including new/extended sewer lines, will begin and be completed and the date by which operations of the improved facility will begin.

The CMAR will contract with the City to provide construction services for the WWTF upgrade and expansion through four distinct Guaranteed Maximum Price (GMP) contracts. The GMP No. 1 contract to purchase the Membrane System Supplier (MSS) supplier equipment is underway and all GMP contracts to upgrade the plant are anticipated to be executed by November/December 2024. The conversion of the plant to an MBR system is anticipated to be substantially completed by September 2027 and final completion is anticipated to be reached in December 2027. Below is a table showing the start date, substantial completion date and final completion date for each GMP contract.

Onsite Sewage Treatment and Disposal System (OSTDS) Remediation Plans

OSTDS Minimum Requirement No. 1: An inventory of the OSTDS (including locational information, such as GIS shape files, if available, or an Excel spreadsheet with addresses and/or latitude and longitude) within the local government's jurisdiction or service area based on the best information available.

Figure 1 shows both City of Winter Garden parcels and Orange County parcels within the City's jurisdictional boundaries that have septic systems according to the City's Utility Billing database. There are a total of 1,038 parcels in the City on septic with 430 parcels designated with the City Code of Winter Garden according to the Orange County Property Appraiser (OCPA). The remaining 608 of the 1,038 septic parcels within the City's jurisdictional boundary are within unincorporated Orange County. Table 6 below shows the percentage of septic parcels according to each jurisdictional agency and the total percentage of septic parcels within the Winter Garden/Orange County Joint Partnership Agreement (JPA) area. An excel spreadsheet with latitude/longitudes and addresses for the parcels shown in Figure 1 are provided in Attachment B to this memo.

OSTDS Minimum Requirement No. 2: An estimate of future growth in new OSTDS over the next 20 years in the local government's jurisdiction or service area (including local information, such as GIS shape files, if available, or an Excel spreadsheet with addresses and/or latitude and longitude.

A GIS analysis was performed to locate City of Winter Garden or Orange County vacant parcels that are considered developable and more than 200 linear feet (LF) from any existing sewer infrastructure. Vacant parcels more than 200 LF away from existing sewer infrastructure were considered candidates for needing an enhanced nutrient reducing OSTDS system to comply with House Bill 1379/Laws of Florida 2023-169. However, the four vacant Orange County parcels are included in developments that are planned for septic to sewer Capital Improvement Plan (CIP) projects within the next twenty years. Two of the vacant parcels are within the Country Lakes subdivision which is targeted to have central sewer installed between FY 35 and FY 40. The other two vacant parcels are in the Palm Ave & 9th Street area which is targeted to have central sewer installed between FY 35 and FY 40.

OSTDS Minimum Requirement No. 3: An inventory of OSTDS that are expected to be eliminated over the next 20 years through connection to central sewer lines of a domestic wastewater facility or other distributed wastewater system with additional nutrient reduction (including locational information, such as GIS shape files, if available, or an Excel spreadsheet with address and/or latitude and longitude).

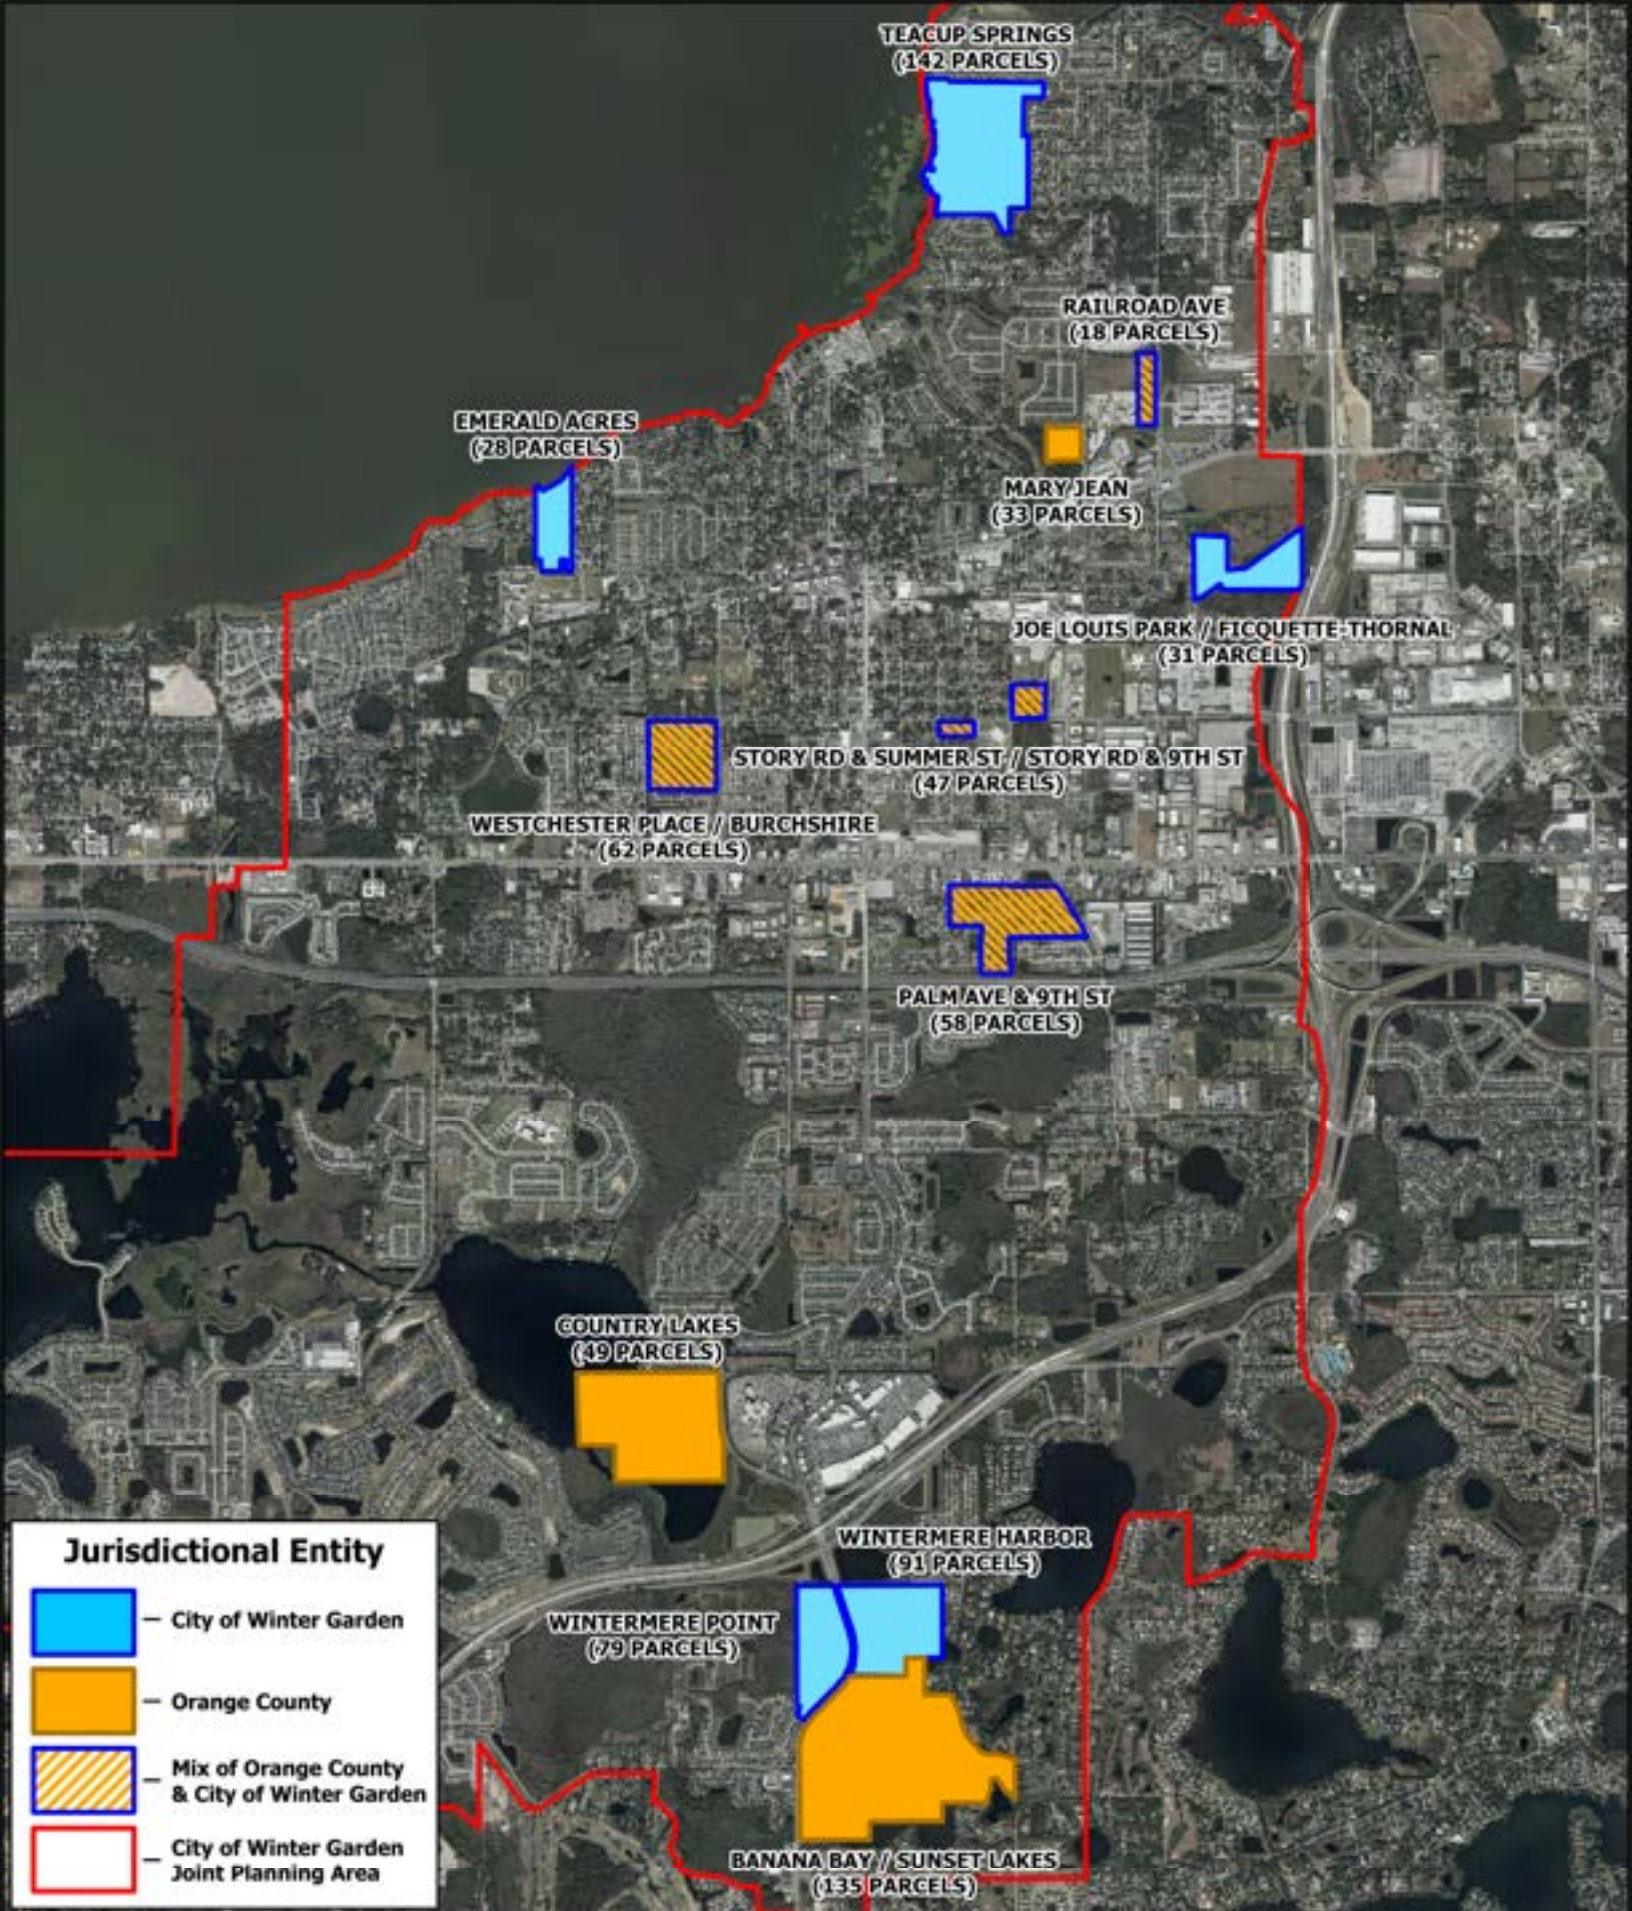

Figure 2 shows the developments and areas within the City of Winter Garden's jurisdictional boundary which are on septic and targeted to be eliminated through connection to central sewer service over the next twenty year period. There are a total of 394 Winter Garden parcels with a septic system that are targeted to be eliminated and 376 Orange County parcels with a septic system that are targeted to be eliminated. Included in the 394 Winter Garden parcels to be eliminated are 31 parcels within the Joe Louis Park/Ficquette Thornal subdivision that have already had central sewer service installed adjacent to properties within the subdivision. Residents within this subdivision will be required to connect to sewer if they experience a septic system failure or want to redevelop their property. An excel spreadsheet with lat/longs and addresses for the parcels shown in Figure 2 are provided in Attachment B to this memo.

Included in the 376 Orange County parcels to be eliminated are 62 parcels within the Westchester Place/Burchshire subdivision that also have had central sewer service constructed adjacent to the parcels. Similarly, properties within this subdivision will be required to connect to sewer if their septic system fails or they want to redevelop their property.

Table 7 shows the percentage of septic systems that are expected to be eliminated over the next twenty years for each jurisdictional entity. Also shown is the percentage of septic systems that will be eliminated within the City's jurisdictional boundary.

Table 7. Septic Systems Targeted for Elimination

Jurisdiction	Parcels on Septic	Parcels to be Converted	Percent of Parcels Eliminated
Winter Garden	430	394	91.6%
Orange County	608	376	61.8%

OSTDS Minimum Requirement No. 4: Identification of deadlines and interim milestones for the planning, design, and construction of new/extended central sewer lines and replacement of OSTDS by connection to the new/extended lines (including locational information, such as GIS shape files, if available, or an Excel spreadsheet with address and/or latitude and longitude).

Table 7 summarizes the anticipated schedule for the City of Winter Garden CIP projects (Figure 2) that will convert septic system areas/subdivisions to central sewer service over the next twenty (20) fiscal years. The Joe Louis Park/Ficquette Thornal subdivision and Westchester Place/Burchshire subdivisions are not included in the table below since sewer infrastructure has already been installed adjacent to all parcels within these two communities.

OSTDS Minimum Requirement No. 6: For OSTDS that are not expected to be eliminated over the next 20 years through connection to central sewer lines, an estimate of the number of these OSTDS that will require upgrading to enhanced nutrient-reducing OSTDS or participating in a distributed wastewater treatment system with additional nutrient-reduction (including locational information, such as GIS shape files, if available, or an Excel spreadsheet with address and/or latitude and longitude) within the local government's jurisdiction, in order to meet the water quality objectives of the BMAP.

Figure 3 shows the total number of parcels remaining after the elimination of septic parcels through the septic system conversion CIP projects shown addressed in the OSTDS Requirement No. 3 (Figure 2). The parcels shown in Figure 3 include both septic system parcels greater than one acre and septic parcels that are one acre or less. The parcels greater than an acre are considered good candidates for development or redevelopment and will be required to connect to central sewer in order to receive approval to develop the properties.

Table 9 summarizes the percentage of parcels that are remaining on septic within each jurisdiction. The table assumes that none of these parcels are redeveloped over the next twenty years and that none of the Orange County parcels are annexed into the City over the next twenty years.

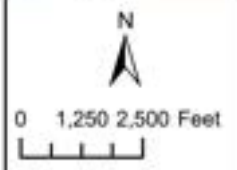

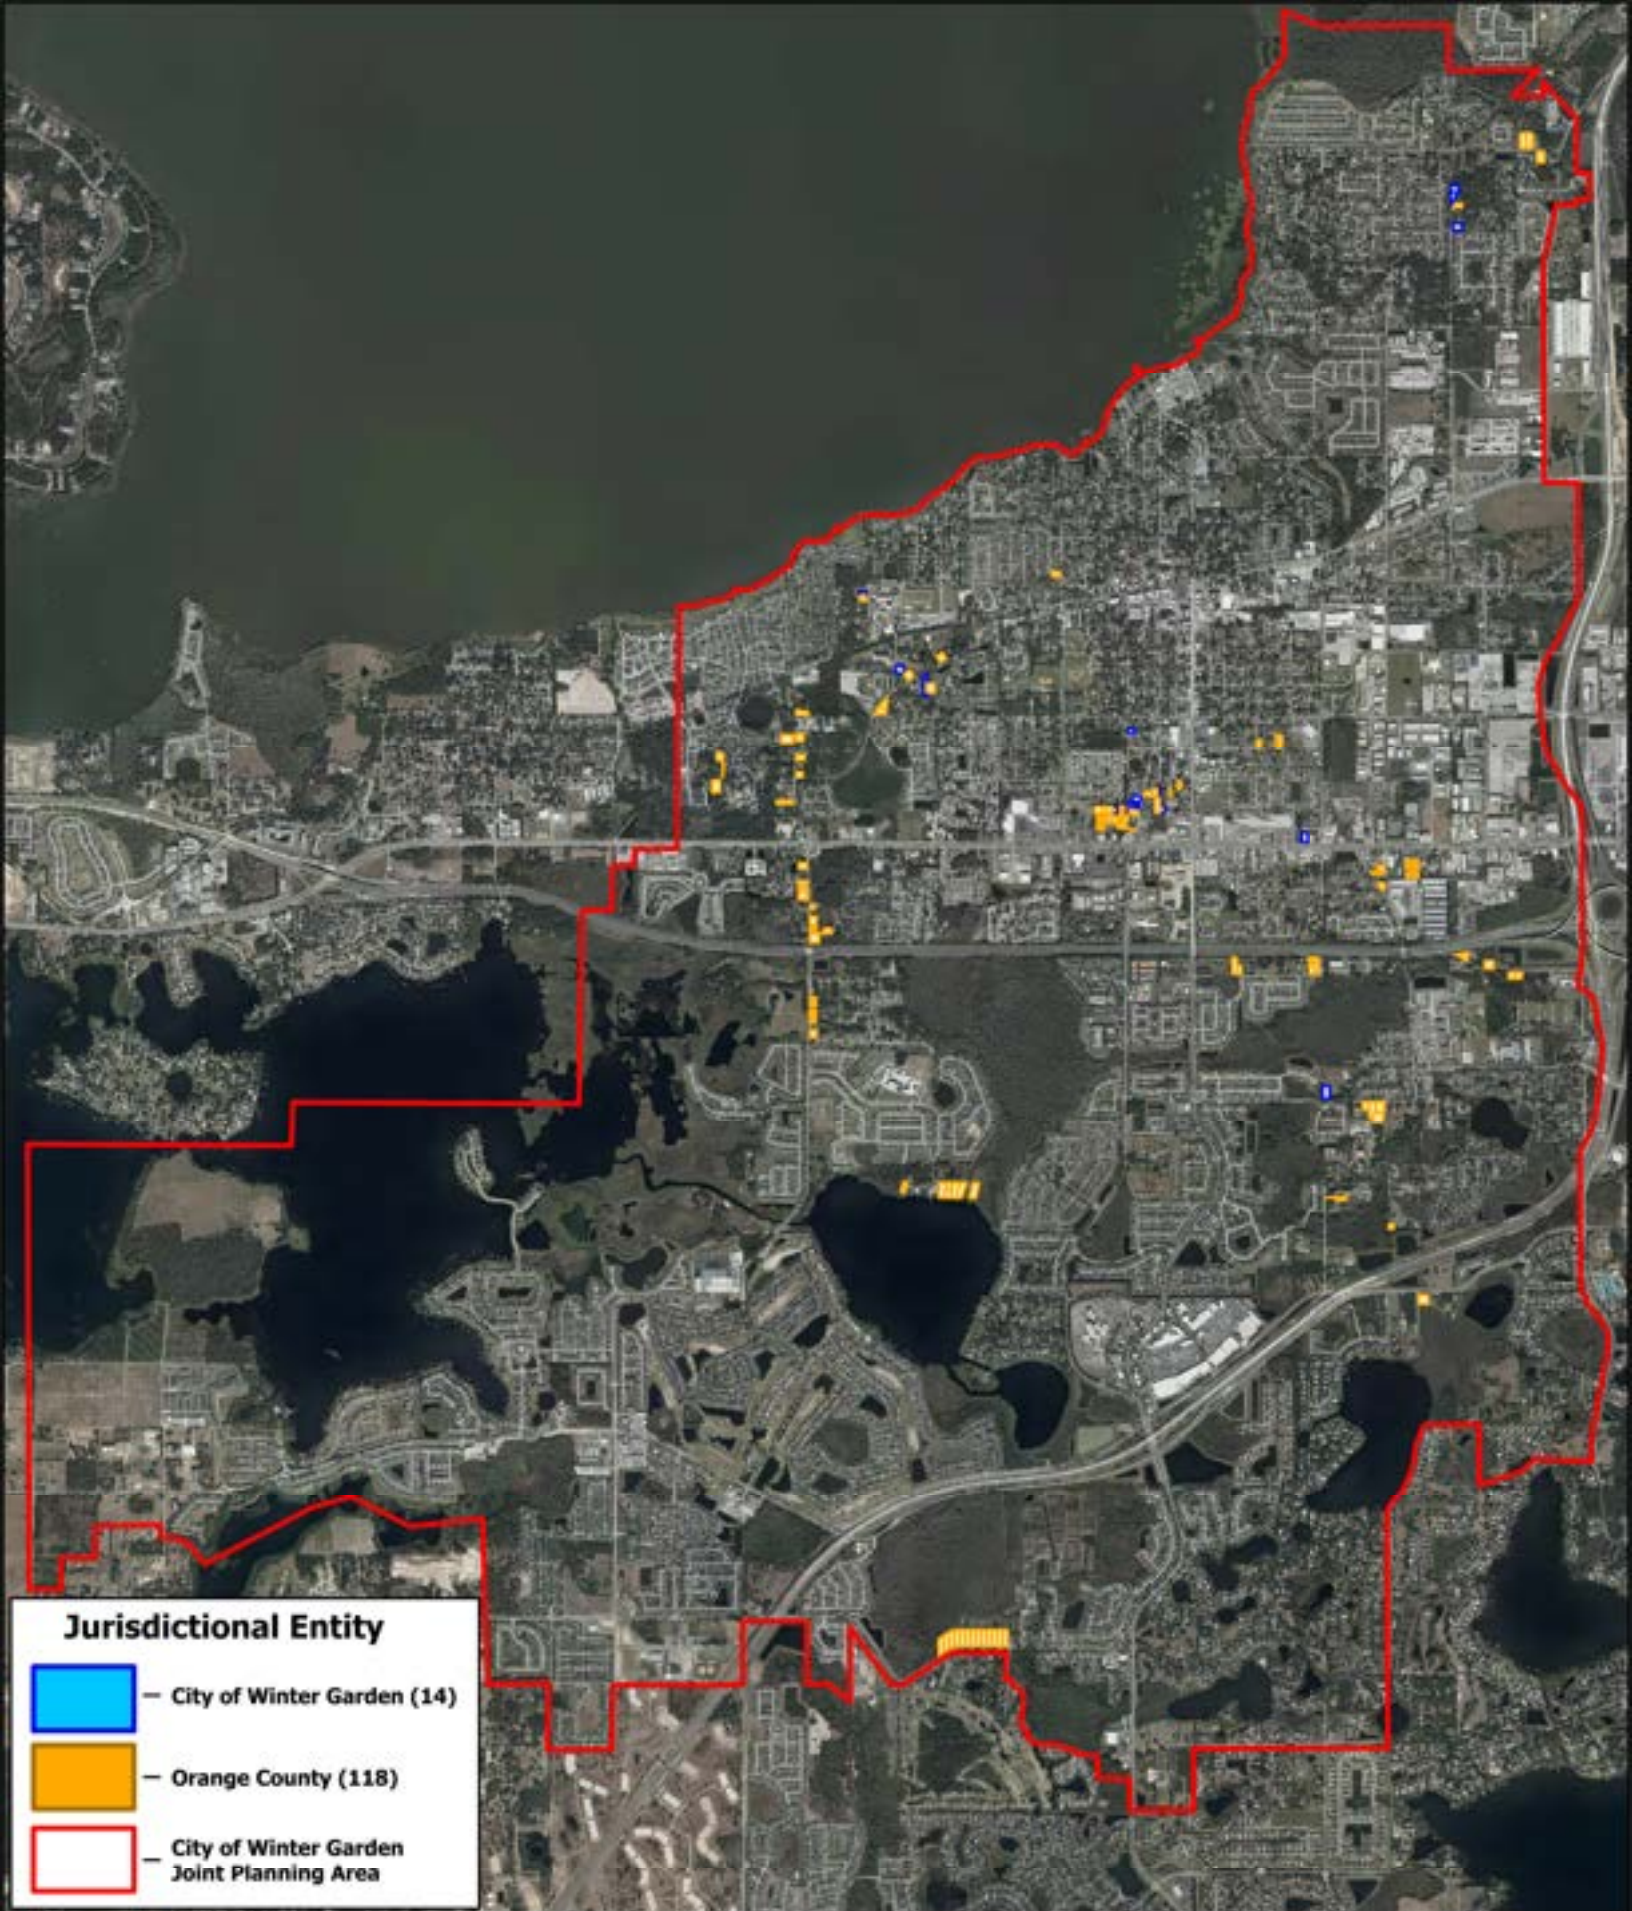

Figure 4 shows septic system parcels that are less than one acre and that would be required to upgrade their conventional septic system to an enhanced nutrient-reducing septic tank. The table below shows the number of septic system parcels that are one acre or less that will have to transition to an enhanced nutrient-reducing septic tank within each jurisdiction.

Table 10 summarizes the percentage of parcels that are needing to upgrade to an enhanced nutrient-reducing septic tank within each jurisdiction. Table 10 also assumes that none of these parcels are redeveloped over the next twenty years and that none of the Orange County parcels are annexed into the City over the next twenty year period.

Total	19,133	132	0.69%

Wastewater Treatment & OSTDS Plan Compliance Report

6 OSTDS to remain (less than one acre) - Figure 4

OSTDS Minimum Requirement No. 7: The estimated costs associated with upgrading to enhanced nutrient reducing OSTDS that are identified in 6).

It is assumed that the burden of cost to each property owner who needs to convert their conventional septic system to an enhanced nutrient-reducing septic system will range from \$7,000 to \$20,000. The City would bear some expense for training City staff to assist property owners with obtaining funding to help fund the conversion from a conventional septic system to an enhanced nutrient-reducing septic system.

OSTDS Minimum Requirement No. 8: Any other cost effective and financially feasible projects necessary to achieve the nutrient load reductions for OSTDS in order to meet the water quality objectives of the BMAP with estimated costs, timelines, and locational information.

No further projects are anticipated to be needed based on the achievement of reaching nearly 99.92% of all City of Winter Garden parcels being connected to City sewer by FY 2045.

EXECUTIVE SUMMARY

This Capacity Analysis Report (CAR) has been prepared on behalf of City of Winter Garden (City) to support the FDEP permit renewal (FL0020109) and proposed expansion of the Crest Avenue WWTF in accordance with the requirements established in the Florida Administrative Code (F.A.C) 62-600.405. This CAR describes existing permitted capacities, Average Daily Flows (ADF), seasonal variations in flow, loading information, and flow and wastewater characteristic projections. The review and analysis of historical flow data and future flow projections indicate that the City of Winter Garden Crest Avenue WWTF capacity of 4.75 million gallons per day (MGD) will be exceeded within 8 years.

An Operation and Maintenance Performance Evaluation Report (OMPR) for the City of Winter Garden Crest Avenue WWTF has also been prepared in association with the permit renewal process and is submitted as a separate document.

In December 2020, the City solicited statements of qualifications under Request For Qualifications (RFQ) 17-025, Crest Avenue WWTF Capacity Expansion and Process Optimization. The objective of the RFQ was to maximize the capacity of the existing structures while meeting the advanced wastewater treatment effluent limits as defined by FDEP. The RFQ was awarded to Atkins North America and preliminary design efforts began in July 2021. The Preliminary Design Report will also be submitted in this permit renewal package as a separate document.

1.0 INTRODUCTION

The City of Winter Garden (City) owns and operates the Crest Avenue Wastewater Treatment Facility (WWTF). The WWTF is located at 101 East Crest Avenue in western Orange County along the southern shores of Lake Apopka. The FDEP operating permit for the WWTF (#FL0020109) was issued on May 30, 2018 and will expire on May 29, 2023. This facility is classified as a Category I, Class A facility. Figure 1-1 presents a location map of the City's WWTF.

The facility's processes include flow equalization, influent screening, grit removal, and biological nutrient removal (via a 5-stage Bardenpho process) provided in two process trains (East & West), clarification, filtration, and disinfection by chlorination. Solids processes include sludge holding tanks and dewatering by belt filter presses (BFP). The BFP filtrate is recycled back to the headworks, while the resulting dewatered sludge cake is treated and disposed of by a contract hauler for land application, approved by FDEP. Figure 1-2 presents the existing Crest Avenue WWTF process flow diagram (PFD). Figure 1-3 presents an aerial of the existing WWTF site.

Treated effluent is discharged offsite to the reclaimed water storage tanks where reclaimed water is then distributed to the existing public access reuse customers (R-002). The permitted capacity of the reclaimed water distribution system is 4.75 MGD Annual Average Daily Flow (AADF). Plant effluent not meeting Florida Department of Environmental Protection's (FDEP) reclaimed water standards as well as wet weather flows are diverted to the rapid infiltration basins (RIBs) which have a permitted capacity of 2.0 MGD AADF (R-001). The RIBs include an underdrain system that discharges via an outfall (D-001) to Lake Apopka (permitted capacity of 1.75 MGD AADF).

2.1 PERMITTED EFFLUENT CRITERIA

FDEP permit, FL0020109, defines flow and effluent criteria for three reclaimed water disposal systems for the Crest Avenue WWTF. These are as follows:

R-001: Rapid rate restricted public access land application / rapid infiltration basin (RIB) system

D-001: Surface water discharge to Lake Apopka from R-001 underdrains

R-002: Slow-rate public access reuse system

The permitted capacity and effluent criteria for these effluent sites are defined in Tables 2-1, 2-2, and 2-3.

2.2 AVERAGE DAILY FLOWS

The City submits monthly operating reports to the FDEP. Flow data has been compiled from these sources from 2017 to 2021. The data has been analyzed to determine the monthly average daily flow, the 3-month average daily flow, and the annual average daily flow for the 5-year operating period.

2.2.1 Monthly Average Daily Flow

Monthly average daily flow (MADF) for the WWTF ranged from 2.90 MGD in April–May 2017 to a maximum of 4.78 MGD in September 2020, as shown on Figure 2-1. MADF data for the WWTF during the operating period is provided in Table 2-4.

2.3 SEASONAL VARIATIONS IN FLOW

The seasonal variations in flow at the facility are shown above in Figure 2-1 Monthly Average Daily Flow. The trend of the MADF shows the summer and fall to be the periods of highest flow. Table 2-6 identifies the month in which the maximum rolling 3-month ADF occurs for the past 10 years as well as the ratio of the 3-month average daily flow to the AADF for the past 10 years. The trend of the 3-month average daily flow shows the fall and winter of each year to be the highest, with October being the most frequent high flow month.

Table 2-8 shows the performance to the plant over the last 12 months compared to the most stringent of the permitted values for effluent quality. During Hurricane Ian, chlorine residual values dropped below the permitted limit of 1.0 mg/L due to a record plant influent flow, which were beyond the capacity of the chlorine system. These values were not included in the facility performance as they are not representative of normal plant operations.

3.0 FUTURE CONDITIONS

3.1 POPULATION PROJECTIONS

The City is currently reevaluating and updating their Comprehensive Plan. As part of this effort, Florida Housing Data Clearinghouse calculated and projected the City's population. The 2020 population of Winter Garden based on this effort was 49,344 with a projected growth of approximately 40% over the next 20 years. Figure 3-1 shows the population projections based on data provided by the Florida Housing Data Clearinghouse.

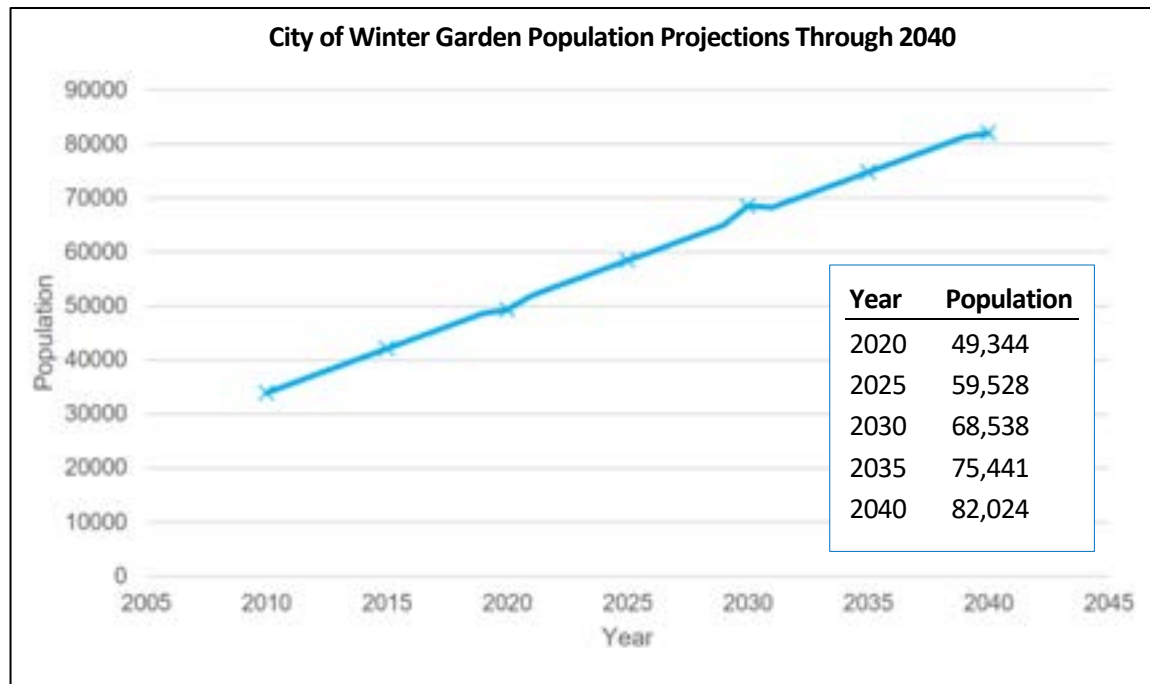

Figure 3-1. Population Projections for Winter Garden
Graph courtesy Mead & Hunt (2022)

3.2 FLOW PROJECTIONS

Figure 3-2 shows the projected flows which were calculated by multiplying the population projections by an average flow of 70 gpd per capita (gpcd). Seventy gpcd was the average demand per person from 2010 to 2020 for the City. Based on these projections, the Crest Avenue WWTF will exceed its current permitted capacity in 2030.

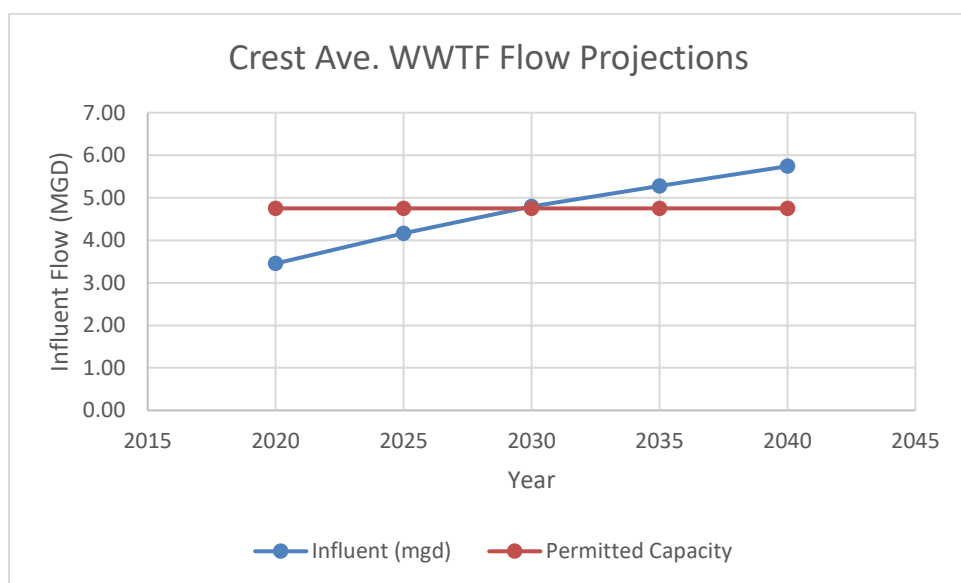

Figure 3-2. Projected Flows

3.3 PROJECTED WASTEWATER CHARACTERISTICS

The City has contracted with Atkins to expand the Crest Avenue WWTF by converting the existing treatment facility from a 5-stage biological treatment to a 5-stage Membrane Biological Reactor (MBR) design. This expansion is discussed further in Section 4 of this document. As part of determining the basis of design, the project wastewater characteristics were determined for flows of 6.8 mgd and 7.5 mgd as shown in Table 3-1.

4.0 SUMMARY AND CONCLUSIONS

4.1 SUMMARY

The influent flow rates for the Crest Avenue WWTF increased from 3.18 to 3.81 MGD AADF from 2017 to 2021 for an increase of 20% in five years. The highest flow increase was observed from 2019 to 2020, when the influent flow increased from 3.4 to 4.0 MGD AADF which is approximately 84 percent of the permitted AADF for the WWTF. Similar trends were observed for TSS, BOD₅, TKN, and TP, where loadings were fairly consistent between 2016 and 2019, then increased in 2020, and returned to previous trends in 2021. If the current trend in flows and loads continues, the influent to the WWTF could exceed its permitted treatment capacity by 2029.

4.2 TIME REQUIRED FOR THE THREE-MONTH AVERAGE TO REACH THE PERMITTED CAPACITY

As shown in Section 3, the population in Winter Garden is expected to increase by 40% over the next 20 years. If this growth trends as expected, the WWTF will exceed its permitted treatment capacity in 2029.

4.3 RECOMMENDATIONS FOR EXPANSION

To support the City's dynamic growth within the service area and to improve reclaimed water quality, the City of Winter Garden solicited statements of qualifications for professional engineering services under RFQ #17-025, Crest Avenue WWTF Capacity Expansion & Process Optimization. The objectives of the RFQ are to increase the treatment capacity of the Crest Avenue Wastewater Treatment Facility (WWTF) while optimizing process modifications to meet expected future effluent quality requirements.

A Preliminary Design Report, submitted under separate cover, documents the findings and conclusions resulting from the preliminary engineering effort and will serve as a basis of design and permitting with FDEP. The Report describes the evaluation of the treatment alternatives and the decision to move forward with the conversion of their existing treatment facility from its existing 5-stage biological treatment to a 5-stage Membrane Biological Reactor (MBR) design. With the conversion, the WWTF capacity will be expanded to 7.5 MGD. The Report includes a summary of the proposed facility modifications including new headworks facilities, treatment modifications, and Class 1 reliability improvements. The proposed site plan and process flow diagram are shown in Figures 4-1 and 4-2.

4.4 EXPANSION SCHEDULES

With the WWTF nearing its capacity and an inflationary economy, the City determined that it was in their best interest to engage a Construction Manager at Risk (CMAR) and solicited statements of qualifications under RFQ #17-025, Crest Avenue WWTF Expansion Construction Management at Risk Services. The intent is to utilize the CMAR project delivery method to provide value engineering services during design that will result in schedule and cost savings through early construction packages and pre-purchase of long-lead equipment. The CMAR contract was awarded to Wharton

Smith in October 2022. The preliminary expansion schedule for design and construction services is as follows:

Project Phase	Completion
Preliminary Design	Quarter 1, 2023
60% Design	Quarter 3, 2023
90% Design	Quarter 4, 2023
Final Design	Quarter 1, 2024
