

DEP Algal Taxonomy Summary Report

Date Reported: 5/14/2019

Report sent by: Amelia Rankin, 850-245-8182, Amelia.Rankin@FloridaDEP.gov

Request ID: RQ-2019-05-06-69

Collector: Chase Conley

Event ID: WQAP-2019-05-14-01

Date Collected: 5/13/2019 1:40:00 PM

LIMS Sample ID: 2085711

Date Received: 5/14/2019 10:00:00 AM

Analysis: BLOOM-ID

Sample Container: Plastic Tube 50 mL

Site Location: Blackburn Point Bridge

Sample Preservation: ICE

Field ID: Blackburn Point Bridge

Analyst: Isaura Lorenzo-Perez

Sample Notes: The sample contained a large algal mat in pink-colored water. The benthic attached diatoms, *Pleurosigma* sp., *Coscinodiscus* sp., *Tryblionella* sp., *Amphora* sp., and *Navicula* sp., were present. Algae appeared alive and healthy.

Result: Dominant taxon was Lyngbya-like filamentous cyanobacteria (cf. *Lyngbya majuscula*)

Other Taxa Present: **Toxin Potential ***

Cyanophyceae

Lyngbya majuscula

* Information based on literature searches and personal communication; information is continually being updated. "Undetermined" refers to specimens for which the lowest practical level of taxonomic identification is genus and some, but not all, species within that genus have the potential to produce toxins or toxin information not available for the identified species but is available for genus level.
