Sample Notes: The sample contained a large algal mat in pink-colored water. The benthic attached diatoms, *Navicula* sp. and *Synedra* sp., were abundant.

Result: Dominant taxon was Lyngbya-like filamentous cyanobacteria (cf. *Lyngbya majuscula*)

Other Taxa Present:

Toxin Potential *

Cyanophyceae

Oscillatoria sp.

Undetermined

Lyngbya majuscula

* Information based on literature searches and personal communication; information is continually being updated. "Undetermined" refers to specimens for which the lowest practical level of taxonomic identification is genus and some, but not all, species within that genus have the potential to produce toxins or toxin information not available for the identified species but is available for genus level.
