Okay, now I see where you're coming from,
➤ >48hrs. can be run but will be Q qualified
➤ >72 hrs. will not be run

We will not use chlorophyll results that are Q qualified. So the answer is cancel the tests.

Thanks,
Curtis

Subject: RE: SMP Protocol Clarification

I misunderstood them, the optimal hold time is 48 hours, afterwards they receive a Q qualifier but I was unsure whether the Q qualifier was acceptable for Chlorophyll. They are viable for 72 hours but only with a Q qualifier, our SMP Protocol doesn't mention it so I wanted to clarify.

Diane/Jennifer, if I have said anything improper, I'm sure you could explain it much better.

Ian,

Why will the CHLA samples get qualified? What qualifier are we talking about here?

Thanks,
Curtis

Subject: SMP Protocol Clarification

Good morning, I received a couple of late coolers (RQ-2021-01-18-35) and found that the Chlorophylls were still able to be ran (72 hour hold time) but will get qualified. Would you like these ran or discarded along with the other late samples? Everything arrived within temp and attached is the SMP protocol. If you have any questions, feel free to ask. Have a great day!

SMP Project

Login Protocol

The SMP project can't (with certain exceptions) use either Y or Q qualified data and would rather have Receiving not login these samples. It's considered a waste of laboratory resources to analyze affected samples that will be qualified, and their data will not be used by the SMP project.

1. The SMP project does not want "Y" qualified preserved nutrients, unpreserved nutrients, microbiology, Chlorophyll, or metals data. (I.e. preservation NCR; acid or ice).
 - Preservation Exception: qPCR and organic samples (They still want these data)
 - Preservation NCR ("Y" qualifier) are acceptable for temperature and chlorine detections for these analyses.

Note: *Unpreserved metals samples may be preserved/acidified in the lab upon receipt and do not need to be qualified if they are analyzed 24 or more hours after acidification.*

2. The SMP project does not want "Q" qualified preserved or unpreserved nutrients data. (I.e. Out of hold time).
 - Hold Time Exception: microbiology, qPCR, and organic samples (They still want these data)
 - Out of hold time ("Q" qualifiers) are acceptable for these analyses.
