Laboratory
Sample #[illegible]

• Sample Type² is used to indicate whether the sample was a grab (G) or whether it was a composite (C).

Simple Matrix is used to indicate whether the sample is being discharged to drinking water (DW), groundwater (GW), surface water (SW), fresh surface water (FSW), saline surface water (SSW), soil/sediment (SDMT), or sludge (SLDG).

"Container Type" is used to indicate whether the container is plastic (P) or glass (G).

Sample must be refrigerated or stored in wet ice after collection. The maximum temperature during storage should be 6°C (42.8°F). Under "Preservative," list any preservatives that were added to the sample container.

a label identifying sample ID, premixed preservative contained in the bottle, sample type, client ID, and parameters for analysis.

Information should be added to each bottle label after collection with permanent black ink: date and time of collection, sampler's name or initials, and any acid number or ID.

containing preservative may be used with appropriate sample prior to collection.

responsible for documentation of the sampling event. Please note special sampling events on the sample custody form.

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 1, 1861. It is a very important document, as it sets out the President's policy on the secession of the Southern States. The President states that he is bound by the Constitution to preserve the Union, and that he will use all the powers of the Government to do so. He also states that he will not recognize the secession of any State, and that he will treat all the States as equal.

for:

10

A hand-drawn diagram of a DNA double helix. The two strands are represented by two parallel lines that twist around each other. Between the strands, four base pairs are indicated with lines connecting them: 'A-T', 'C-G', 'G-C', and 'T-A'.
