For data on the distribution of *Epinephelus microdon* and *E. microdon* in the Gulf of Mexico, see [Brett et al. \(1999\)](#). For data on the distribution of *E. microdon* in the Gulf of Mexico, see [Brett et al. \(1999\)](#).

Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair and views the screen through a mirror. The screen displays the target (a red dot) and the starting position (a green dot). The subject's hand is positioned at the starting position. The distance between the starting position and the target is 10 cm. The subject is instructed to move the hand to the target as quickly and accurately as possible. The screen is 100 cm high and 100 cm wide. The subject's hand is positioned at the starting position. The distance between the starting position and the target is 10 cm. The subject is instructed to move the hand to the target as quickly and accurately as possible. The screen is 100 cm high and 100 cm wide.

.....

Sample Type is used to indicate whether the sample was a grab (G) or whether it was a composite (C).

*"Sample Matrix" is used to indicate whether the sample is being discharged to drinking water (DW), groundwater (GW), surface water (SW), fresh surface water (FSW), saline surface water (SSW), soil sediment (SDOWN), or sludge (SLDG).
 *"Container Type" is used to indicate whether the container is plastic (P) or glass (G).

Sample must be refrigerated or stored in wet ice after collection. The maximum

Each bottle should be labelled with a label identifying sample ID, premeasured preservative contained in the bottle, sample type, client ID, and parameters for analysis.

containing preservative may be fitted with appropriate sample prior to collection.

responsible for documentation of the sampling event. Please note special sampling events on the sample custody form.
